nave done well to adopt in some other points.

3. That individual peculiarity of physical organization by which the manner of acting, feeling, and thinking of each person is permanently affected. The ancients distinguished four temperaments, which derived their names from the fancied excess of one or other of the principal humours or fluids of the body; as, the choleric or billous, from Gr. chole, bile; the phlegmatic, from phlegma; the melancholic, from melania, black, and chole, bile; and the sanguine, from L. sanguis, blood. Many modern authorities have adopted a classification indicative of the fulness of habit and relative activity of the mutritive functions, and cerebro-spinal acnutritive functions, and cerebro-spinal activity, employing the terms sanguineous, nervous, nervous, amguineous, sanguineous, sanguineous, and phlegnatic. Dr. Cullen and others admit of only two temperaments, the sanguine and the melancholic, considerate the sanguine and the melancholic considerates the sanguine and the sa ing the phlegmatic a degree of the sanguine, and the choleric of the melancholic; and and the choicere of the meranentne; and many of the so-called temperaments, as the bilious, melancholic, and lymphatic have been looked upon merely as departures from health, the result of imperfect development, health, the result of imperfect development, incorrect habits, bad nutrition, and inactive functions of the body, which may be modified or removed by corrected habits, regimen, or medical treatment.—4.† Condition as to heat or cold; temperature. 'In proportion to the fertility of the soil and the temperament of the climate.' Cook.

Bodies are denominated hot or cold in proportion to the present temperament of our body to which they are applied.

Locke.

5. In music, a certain adjustment or regulation of the tones or intervals of the scale of fixed-toned instruments, as the organ, piano, nxect-toned instruments, as the organ, plano, and the like, with the view of removing an apparent imperfection, and fitting the scale for use in all keys without offence to the ear. The intervals between the notes of the natural scale are by no means equal. Thus, sup-

posing the perfect octave to be divided into fifty-three equal parts, or commas as they are technically called, and taking C as the fifty-three equal parts, or commas as they are technically called, and taking C as the key-note or tonic, the intervals between the notes would be made up as follows: C to D, commas; D to E, 8; E to F, 5; F to G, 9; G to A, 8; A to B, 9; B to C, 5. We have here three species of intervals, of which those represented by 9 are called major tones; those by 8, minor tones, and those by 5, major semitones. A fixed-toned instrument tuned on this principle would fully satisfy the ear with the correctness of its tones and the richness of its concords while the key of C was adhered to. But if we start, say, from D as a key-note, the proportions of the scale, or the sequence of the major and minor tones and of the semitones, are destroyed. D to E would form a tolerable, though not absolutely correct second, but the third and seventh of the scale would be entirely wrong. Were the major and minor tones equal, and each semitone exactly half a tone, the insertion of a note between each full tone, exactly dividing the intervals between them, would give an ideally symmetrical scale and it would be intervals between them, would give an ideally symmetrical scale, and it would be immaterial where the scale began, as each of the twelve notes would be available as a key-note. Now, though such an equality is contrary to the principles of harmonics, an adjustment or arrangement of the sounds of fixed-toned instruments founded on it gives fixed-toned instruments founded on it gives practically no offence unless to the critical ear. In what is termed equal or even temperament, which is now, theoretically at least, adopted for all pianos, organs, harmoniums, &c., the twelve semitones are all adjusted so as to stand at intervals of the same length, and thus no advantage is given to one key over another. In the unequal or vulgar temperament, formerly adopted for organs some popular keys, as B5. K. or vingar temperament, formerly anopied for organs, some popular keys, as B5, F, C, G, and D, were favoured at the expense of the rest, that is, the true intervals of the normal or natural scale were pretty closely adhered to: but the harsh fifths and thirds (the Wolf tones of musicians) and thirds (the Wolf tones of musicians) occurring in the keys written in several flats or sharps caused this system to be abandoned. The different characters of the various keys recognized on most fixed-toned instruments could have no existence were could tonescent to the positive absolutely adhered to equal temperament absolutely adhered to, and are due to the fact that some discrimination is still practically used in favour of certain popular keys, though not to such an extent as to injure very sensibly the effect of keys less favoured. The only instruments of orthestral importance analysis of preof keys less ravoired. The only instruments of orchestral importance capable of producing just intonation, or of being played in perfect tune, are those of the violin family, which in this respect approach the perfection of the human voice; and were not a habit of incorrect intonation too often acquired by performing to the accompani-ment of tempered instruments, the skilful singer or violinist could produce his notes in true key relationship through the most intricate modulations or changes of key.

Tenure (ten'ūr). n. [Fr. tenure, L. L. tenura, from L. teneo, to hold.] 1. The act, manner, or right of holding property, especially real estate. Land may be held according to two main principles, the tenure being either feudal or allodial. According to the latter tenure, the whole right and title of the land rests with the owner; according to the former, the person possessing the subject holds it from a superior, and this is the principle universal in England. According to the theory in England all land is held of the crown, either mediately or immediately. The ownership of land is therefore never unlimited as to extent, for he who is the owner of land in the a which is the levener. The ownership of land is therefore never unlimited as to extent, for he who is the owner of land in fee, which is the largest estate that a man can have in land, is not absolute owner: he owes services in respect of his fee (or flef), and the seignory of the lord always subsists. All land in the hands of any layman is held of some lord, to whom the holder or tenant owes some service; but in the case of church lands, although they are held by tenure, no temporal services are due, but the lord of whom these lands are held must be considered the owner, although the beneficial ownership can never revert to the lord. All the species of ancient tenures may be reduced to four, three of which subsist to this day:—(1) Tenure by knight service, which was the most honourof which subsist to this day:—(1) Tenure by knight service, which was the most honourable. This is now abolished. (2) Tenure in free socage, or by a certain and determinate service, which is either free and honourable, or villelin and base. (3) Tenure by copy of court roll, or copyhold tenure. (4) Tenure in ancient demain. There was also tenure in frankalmoigne, or free alms. The tenure in free and common socage has absorbed most of the others. (See TENANT, COPYHOLD, SOCAGE, VILLENAGE.) In Scots law the equivalent technical term is holding. 2. The consideration, condition, or service which the occupier of land gives to his lord or superior for the use of his land.—3. Manner of holding in general; the terms or condiof holding in general; the terms or condi-tions upon which anything is held or re-tained; as, in absolute governments men hold their rights by a precarious tenure.

Sending it (the charge in the gun) skimming along so near the surface of the ground as to place the lives of the dogs on a rather uncertain and precarious tenure.

The earlier geologists used this term as designating all strata above the secondary but later discoveries have tended to modify its sense by way of restriction. As now employed the term tertiary formation designates the rock-system extending from the chalk (the highest member of the secondary), on which it rests, to the base of the postertiary system, which latter, according to some, includes the strata belonging to the glacial epoch, while others leave them in the tertiary. It is noteworthy that there is a complete and entire physical break between the rocks of the secondary or meso-zoic and tertlary periods, the latter resting in no instance conformably on the former, while there is an equally complete break in in no instance conformably on the former, in no instance conformably on the former, while there is an equally complete break in the life of the two periods, not a single secondary animal or plant being known to have survived the cretaceous period with the exception of a few Foraminifera. In the tertiary rocks, on the other hand, not only are all the animals and plants more or less like existing types, but we meet with a constantly increasing proportion of living species as we pass from the bottom to the top. The classification of the tertiary fornation is based on this increase, the strata being The classification of the tertiary formation is based on this increase, the strata being divided into two great groups as follows:—
(1) The OLDER TERTIARY, comprising the Ecoene, with five per cent of living species, and the Miccene, with twenty-five per cent. (2) The NEWER TERTIARY, comprising the Older Phiccene, containing fifty per cent of living species, and the Newer Phiccene, containing interviews princey five per cent.

Same root as obsolete verb to the or thee.] A title of honour among the Anglo-Saxons. In England a freeman not noble was raised to the rank of a thane by acquiring a certain portion of land—five hides for a lesser thane—by making three sea voyages, or by receiving holy orders. Every thane had the right of voting in the witenagemot, not only of the shire but also of the kingdom when imporshire, but also of the kingdom, when imporshire, but also of the kingdom, when impor-tant questions were to be discussed. With the growth of the kingly power the impor-tance of the king's thanes (those in the per-sonal service of the sovereign) rose above that of the highest gentry, ealdormen and bishops forming an inferior class. On the cessation of his actual personal service about the king the thane received a grant of land. After the Norman conquest thanes and barons were classed together. In the reign of Henry II, the title fell into disuse. In Scotland the thanes were a class of non-military tenants of the crown, and the title scottand the thanes were a class of non-military tenants of the crown, and the title was in use till the end of the fifteenth cen-tury. (c) Pointing not so much to persons and things (c) Pointing not so much to persons and things as to their qualities, almost equivalent to such, or of such a nature, and occasionally followed by as or that as a correlative. 'There cannot be that vulture in you to devour so many.' Shak. 'Entertained with that ceremonious affection as you were wont.' Shak. 'Whose love was of that dignity that it went hand in hand with the vow.' Shak.

2. Used absolutely or without a noun as a 2. Used absolutely or without a noun as a demonstrative pronoun (a) to indicate a person or thing already referred to or implied, or specially pointed at or otherwise indicated, and having generally the same force and significance as when used as an adjective; as, give me that; do you see that? (b) Used in opposition to this, or by way of distinction.

If the Lord will, we shall live, and do this or that Jam. iv. 15.
This is not fair; nor profitable, that. Dryden.

When this and that refer to foregoing words, this, like the Latin hic or the French ceci (this), refer to the last mentioned, the latter, and that, like the Latin ille and French cela, to the first mentioned, the former. This is an artificial grammatical rule, probably founded on the Latin one, and adopted by retirate the title that the control of writers, but it can scarcely be said to rest on any logical conception or law of thought.

Self-love and reason to one end aspire,
Pain their aversion, pleasure their desire;
But greedy And, its object would devour.

That he far from thee, to do after this manne slay the righteous with the wicked. Gen. xviii. That here represents the clause in italics That here represents the clause in italics. It is used also as the substitute for an adjective; as, you allege that the man is innocent; that he is not. Similarly it is often used to introduce an explanation of something going before. 'Religion consists in living up to those principles, that is, in acting in conformity to them.' (d) Used emphatically, with a predicate, in plurase expressive of approbation, applause, or encouragement. 'Why, that's my dainty Ariel!' Shak. 'That's my good son' Shak. (c) By the omission of the relative that often acquires the force of that which; is, however, not in accordance with this is, however, not in accordance with modern usage.

I earn that I eat, get that I wear. We speak that we do know, and testify that we have seen.

Jn. iii. 11.

3. Used as a relative pronoun, and in many cases equivalent to who or which. It can-not, however, be relatively used with a not, however, be relatively used with a preposition preceding it, but may be so used when the preposition is transposed to the end of the clause; thus we say, the man of whom I spoke, the book from which I read, the spot near which he stood, the pay for which he works; but we cannot say the man of that I spoke of, the book that I read from, the place that he stood near, the pay that he works for, and so on. When the relative clause conveys an additional idea or statement, who and which are rather to be relative clause conveys an additional idea or statement, who and which are rather to be used than that, which, indeed, is sometimes inadmissible; thus we say: 'James, whom I saw yesterday, told me, but not 'James that.' That properly introduces a restrictive and explanatory clause (as exemplified by 'The man that I spoke of,' &c.), and though who and which are frequently used in the same way, the use of that often avoids in the same way, the use of that often avoids ambiguity. See under WHO.

prising the species yielding the tea of commerce. Although botanists are now for the most part agreed that tea is the produce of most part agreed that tea is the produce of one species (T. sinensis or chinensis), yet different modes of culture persevered in for many centuries, as well as variations in climate and soil, have caused the original plant to diverge into two varieties so well marked as to be entitled to distinct names—viz. T. viridis and T. bohea. T. viridis is a large, hardy, evergreen plant, with spreading branches, its leaves 3 to 5 inches long, thin, very broadly lanceolate, light green and wavy, with large and irregular serratures, the flowers large, usually solitary, and of a white colour. It is found both in China and Japan. T. bohea is a smaller plant than T. viridis, and differs from it in several particulars. From either species, however, by means of a different process of manipulation in the manufac-

ture, both black and green tea are produced. Tea is cultivated in China over a great extent of territory. It is also extensively cultivated in Japan, in Northern India, and in Ceylon. In China the climate most congenial to it seems to be that between the 27th and 31st degree of north latitude. Its growth is chiefly confined to hilly tracts not suited to the growth of corn, and the

rearing of it requires great skill and atten-tion, as well as the preparation of the leaves. It is perhaps impossible to state definitely the

native country of the tea-plant. Hitherto the only country in which botanists have found it in a really wild state is Upper Assam, the plant indigenous to the country being known as T. assamica or assamensis. This botanists are inclined to report the original of T. the plant indigenous to that gard as the original of viridis and T. bohea.

theatre. (the a-ter), n. [Fr. theatre, from L. theatrum, from Gr. theatron, from theatoma; to see, thea, a view.] 1. A building appropriated to the representation of dramatic spectacles; a play-house. Among the Greeks and Romans theatres were the chief public that the thing and in point. and Romans theatres were the chief public edifices next to the temples, and in point of magnitude they surpassed the most spacious of the temples, having in some instances accommodation for as many as from 10,000 to 40,000 spectators. The Greek and Roman theatres resembled each other in their general form and principal parts. They were regularly of a more or less semicircular form, resembling the half of an amphitheatre, and were not covered by a roof. The space appropriated to the seats of the spectators was termed cavea by the Romans and kollon by the Greeks. The seats were all concentric with the orchestra, and were intersected in one direction by ascents or flights of steps, dividing the seats into so many compartdirection by ascents or flights of steps, di-viding the seats into so many compart-ments. The place for the players, in front of the seats, was called scena (skėnė). The semicircular space between the scena and the seats of the spectators was called orchestra (orchēstra), appropriated by the Greeks to the chorus and musicians, and by the Romans to the senators. Besides these essential parts there were the putum or stage proper, the prosecution, and postscenium, with regard to which

parts the Greek and Roman theatres differed considerably. Scenery, in the modern sense of the word, was not employed,

See THIEF. Final th became t, as in height (which see).] 1. The act of stealing. In law, the general name for the most ordinary chesses of Gancers copies to report from the class of offences against property, for which English law uses the term larceny. Simple larceny, or theft, is committed by wrong-fully taking, against the will of the owner, fully taking, against the win or the owner, and carrying away the goods of another with the fraudulent and felonious intent wholly to deprive him of his property therein. Hence it requires an actual taking, therein. Hence it requires an actual taking, and an actual carrying away for some distance, to constitute the offence. Compound larceny or theft is when the theft is accompanied by aggravating circumstances, as when it is committed upon the person, or consists in stealing from a dwelling-house. Taking from the person in a violent manner is robbery, and stealing in a dwelling-house after having broken therein is burglary. (See LARCENY.) In Scots law, theft is defined 'the intentional and clandestine taking away of the property of another taking away of the property of another from its legitimate place of deposit, or other locus tenendi, with the knowledge that it is another's, and the belief that he would not consent to its abstraction, and with the intention of never restoring it to the owner.' 2. Theodolite (the-od'o-lit), n. [Perhaps from Gr. thea, a seeing, hodos, a way, and litos, plain, smooth, or from thea, and doulos, a slave. In the form theodelitus, the term occurs in Pautometria by T. Digges, a work on mensuration first printed in 1571, where it is said to be 'a circle divided in 360 grades or degrees, or a semicircle parted in 180 portions.'] A most important surveying instrument for measuring horizontal and vertical angles by means of a telescope the movements of which can be accurately marked. This instrument is variously constructed, but its main characteristics constructed, but its main characteristics constructed, but its main characteristics con-tinue unaltered in all forms. One of the forms generally used is shown in the cut. A and B are two concentric horizontal circular plates which turn freely on each other. The plates which turn freely on each other. The lower or graduated plate B contains the divisions of the circle, and the upper or vernier plate has two vernier divisions a diametrically opposite, only one of which is shown in the cut. The vertical axis c consists of two parts, the one working within the other. The external part is attached to the graduated plate B, and the internal to the vernier plate A. The plane

of the circle is adjusted to the horizon by the screws b b b acting against a plate of metal resting on the staff-head supporting the instrument. The vernier plate carries two spirit-levels c at right angles to each other, by means of which the circle may be brought accurately into the horizontal plane. The horizontal axis of the vertical limb E of the instrument is supported by a frame firmly attached to the vernier plate, and turning along with it about the vertical axis. Parallel to the axis a telescope D, with an arrangement of fibres of unspun silk called cross-wires in the principal focus of its object-glass, is attached, which moves in the vertical plane by the movement of the graduated circle E, and is used for observing the objects whose angular distance is to be measured, and also for taking altitudes or measuring vertical angles; a spirit-level is fixed beneath of the circle is adjusted to the horizon by tical angles; a spirit-level is fixed beneath the telescope for horizontal adjustment. the telescope for horizontal adjustment.

The double vertical axis and the use of the clamps enable the observation to be repeated any number of times, in order to ensure accuracy. Theology (the ol'o-ji), n. [Fr. theologie, from Gr. theologia—theos. God, and logos, discourse.] Divinity; the entire science of the Christian religion; the science which treats of God and man in all their known relations to each other; the science which treats (a) of the character and attributes of God; (b) the doctrine of man in his relations to God; (c) the doctrine of the salvation of man through the person and work of Christ; (d) the doctrines of the flual state of all men; and (e) the doctrine of the church, its con-God; (c) the doctrine of the salvation of man through the person and work of Christ; (d) the doctrines of the final state of all men; (d) the doctrines of the final state of all men; and (e) the doctrine of the church, its constitution and government. In reference to the sources whence it is derived, theology is distinguished into natural or philosophical theology, which relates to the knowledge of God from his works by the light of nature and reason; and supernatural, positive, or revealed theology, which sets forth and systematizes the doctrines of the Scriptures. Theology is variously divided according to the method of treating the subject, and the part of the subject which is treated.—Dognatic or theoretical theology, that part of the science which aims pre-eminently to state what is authoritatively taught, whether by the Scriptures, the councils, or the creeds.—Exegetical theology embraces the interpretation of the Scriptures, the science which teaches the principles to be observed in interpretation; and biblical criticism, which examines and tries to establish the genuine text, the authenticity of the various books of the Bible, and the discussion of kindred subjects.—Historical theology treats of the history of Christian doctrines, of heresies of the church, of councils, and the like.—Metaphysical theology aims to substantiate the teachings of the Bible by an appeal to those primitive cognitions and primary beliefs which the Bible always assumes.—Moral theology, or theological controversy, seeks to overthrow the positions of other systems as well as to defend its worn.—Practical theology consists of an exhibition, first, of precepts and directions,

Rational theology gives to human reason the highest authority in determining what is theological truth.—Scholastic theology either proceeds by reasoning or derives the knowledge of divine things from certain established principles of faith.—Speculative theology, a system in which theory predominates over Scripture and all other authority.

Sustantic theology are prepared without the control of -Systematic theology arranges methodically the great truths of religion, so as to enable us to contemplate them in their natural connection, and to perceive both the mutual dependence of the parts and the symmetry of the whole. See RELIGION.

Practice alone divides the world into virtuous and vicious; but as to the theory and speculation of virtue and vice, mankind are much the same. South.

A theory is often nothing else but a contriv-A theory is often nothing else but a contrivance for comprehending a certain number of facts under one expression. Many theories are founded entirely on analogy, and such theories may have all degrees of evidence from the least to the greatest. The evidence of a theory increases with the number of facts which it explains, and the precision with which it explains them. It diminishes with the number of facts which it does not explain, and with the number of different suppositional with the number of different supposition. which it explains them. It diminishes with the number of facts which it does not explain, and with the number of different suppositions that will afford explanations equally precise. A theory may not deserve to be rejected because it does not explain all the phenomena, if it explains a great number and be not absolutely inconsistent with any one, but a single fact inconsistent with any theory may be sufficient to overturn it.

—Theory is distinguished from hypothesis thus: a theory is founded on inferences drawn from principles which have been established on independent evidence; a hypothesis is a proposition assumed to account for certain phenomena, and has no other evidence of its truth than that it affords a satisfactory explanation of those phenomena. It is necessary to keep this distinction in view, as the terms theory and hypothesis are very frequently confounded both in speaking and writing.

Modern theosophists claim that theosophy opens up to mena knowledge of natural powers unknown to ordinary science, and that it leads to various so-called occult manifestations that would ordinarily be recreated as superputural. Such views be regarded as supernatural. Such views have prevailed at various times and in

various countries. Theotechnic (the-o-tek'nik), a. [Gr. theos. God, and technē, art.] Pertaining to the action or intervention of the gods; operated or carried on by the gods. 'The theotechnic

Therms (ther'me), n. pl. [L., from Gr. thermos, warm.] Hot springs or hot baths.
Thermal (ther'mal), a. [From Gr. thermos, hot, warm, from therō, to warm.] Pertaining to heat; warm. 'The thermal condition of the earth.' J. D. Forbes. — Thermal springs, thermal waters, hot springs. — Thermal capacity, the quantity of heat required to raise the temperature of a body one degree. — Thermal unit, a unit or standard fixed upon for the comparison or calculation of the quantity of heat. The British thermal unit is the amount of heat required to raise a pound of water at 62° Fahr. one degree of temperature measured on the Fahrenheit scale. Another unit employed by physicists is the quantity necessary to raise a gramme of water of a kilogramme of water) one degree Centigrade.
Thermally (ther'mal-li), adv. In a thermal manner; with reference to heat.
Thermantidote (ther man'ti-dôt), n. [Gr. Therman, heat, and E antidote (which see).] An East Indian apparatus for producing a current of air.

The thermantialote, which is a sort of windmill worked by hand to make a current of cool air, was pouring its refreshing streams through the house.

W. H. Russell.

Thermetograph (ther-meto-graf), n. Same as Thermometrograph, E. H. Knight.
Thermetrograph (ther-met'rō-graf), n. Same as Thermometrograph, thermit (thermik), a. [Gr. thermē, heat.]

Thermic (ther mik), a. [Gr. therme, heat.] Of or relating to heat; thermal; as, thermic

His great work on volcanoes . . . contained a consistent hypothesis of the cause of the *thermic* disturbance.

Thermidor (ther'mi-dor), n. [Fr., from Gr. therme, heat doron, a gift.] The eleventh month of the year in the calendar of the first French republic. It commenced on the 19th of July, and ended on the 17th of

Augus.

Thermidorian (ther-mi-dő'ri-an), n. One of those who in 1794 took part in the coup d'état by which the fall of Robespierre was effected. They were so named because the 'Reign of Terror' was brought to an end on the 9th Thermidor.

Thermo-, [Gr. thermos, warm, therme, heat.]
The first part of a number of compound words and usually signifying connected with heat or temperature.

Thermo - barometer (ther'mo-ba-rom"eter), u. 1. A thermometer which indicates the pressure of the atmosphere by the boiling-point of water, used in the measurement of altitudes.—2. A siphon-barometer having its two wide legs united by a narrow tube, so that it can be used either in its ordinary position as a barometer or in the reversed position as a thermometer, the wide sealed leg of the barometer then serving as the bulb of the thermometer.

Thermo-chemistry (thermo-kem-is-tri), n.

That branch of chemical science which in-cludes all the various relations existing be-

cludes all the various relations existing between chemical action and the manifestation of that force termed heat.

Thermochrosy (thermochrost), n. [Gr. therme, heat, and chrosis, colouring.] The property possessed by heat of being composed, like light, of rays of different refrangibilities, varying in rate or degree of transmission through diathermic substances.

Thermo-current (thermo-ku-rent), n. The current, as of electricity, set up by heating a compound circuit consisting of two or more different metals.

more different metals.

Thermo - dynamic (thermo-di-nam'ik), a.
Relating to thermo-dynamics; caused or operated by force due to the application of

Thermo-dynamics (ther'mo-di-nam'iks), n. That department of physical science which investigates the laws regulating the conversion of heat into mechanical force or energy, and vice versa; that branch of theoretical physics which treats of heat as a mechanical agent, and which forms the basis on which the modern doctrine of energy is founded.

Thermo-electric (ther'mo-e-lek"trik), a. Pertaining to thermo-electricity; as, thermo-

retraining to thermo-electricity, as, attermo-electric currents.

Thermo-electricity (thermo-electricity, n. 1. Electricity produced at the junc-tion of two metals, or at a point where a molecular change occurs in a bar of the same metal, when the junction or point is heated above or cooled below the general temperature of the conductor. Thus when wires or bars of metal of different kinds, as bis-

muth and antimony, are placed in close contact, end to end, and disposed so as to form tact, end to end, and disposed so as to form a periphery or continuous circuit, and heat then applied to the ends or junctions of the bars, electric currents are produced.—2. The science that treats of the electric currents that arise from heating the junction of two heterogeneous conductors.—Thermo-electric clarater and applications of the properties of the control of the production of alarm, an apparatus designed to indicate the rise of temperature beyond a certain desired point; as for instance to show when the bearings of shaftings are overheated, or when a room is too warm from overheat-ing or in danger from fire. It consists of a thermometer having a wire passing through the bulb, and so connected with the merthe bulb, and so connected with the mercury; and another entering the tube at the top, and extending a certain distance downwards. Each of these wires is connected with a small open circuit having an electric battery and bell. Suppose the presence of fire in an apartment may be inferred from the temperature rising to 100°, this actual rise may be indicated by having the end of the top wire set in the tube opposite this degree on the scale. When the mercury rises and touches 100° the circuit is completed and the bell rung.—Thermo-electric battery, or pile, an apparatus much used in delicate experiments with radiant heat. It consists of a series of little bars of antimony and bismuth (or any other two metals of different, heat-conducting power), having different heat-conducting power), having their ends soldered together and arranged in a compact form; the opposite ends of the pile being connected with a galvanometer, pile being connected with a galvanometer, which is very sensibly affected by the electric current induced in the system of bars when exposed to the slightest variations of temperature. To the combined arrangement of pile and galvanometer the name of thermo-multiplier is given. — Thermo-electric pair, two metal bars of different heat-conducting power, having their ends soldered together, and the combined bar then smally bent into a more or less horse-shoe usually bent into a more or less horse-shoe or magnet form for the purpose of bringing their free ends within a conveniently short distance. They are used in thermo-electric experiments, but as the electric current developed in a single pair is very weak, a considerable number are usually combined, thus forming the thermo-electric pile or battery. Bismuth and antimony are the metals usually employed, the difference in electro-motive force being greater between them than between any other two metals conveniently obtainable. conveniently obtainable.

conveniency obtainable.

Thermo-electrometer (ther'mō-ē-lektrom'et-er), n. An instrument for ascertaining the heating power of an electric current, or for determining the strength of a current by the heat it produces.

Thermogen (thermo-jen), n. [Gr. therme, heat, and genos, ginomai, to generate.] An old name for caloric.

Thermogenous (ther-moj'e-nus), a. Pro-

Thermograph (ther'mo-graf), n. An instrument for automatically recording variations of temperature.

of temperature.

Thermography (thermog'rafl), n. [Gr. therme, heat, and grapho, to write.] A process by which engravings are copied on metal plates, &c., by the agency of heat.

Thermology (thermol'o-jl), n. [Gr. therme, heat, and logos, discourse.] A discourse on or an account of heat. Whewell.

Thermo-magnetism (thermon' mag'netizm), n. Magnetism resulting from, or as affected by, the action of heat.

Thermometer (thermon' et-er), n. [Gr. Thermometer]

Thermometer (ther-mom'et-er), n. [Gr. thermos, warm, from therme, heat, and metron, measure.] An instrument by which the temperatures of bodies are ascertained; founded on the property which heat postron, measure.] An instrument by which the temperatures of bodies are ascertained; founded on the property which heat possesses of expanding all bodies, the rate or quantity of expansion being supposed proportional to the degree of heat applied, and hence indicating that degree. The thermometer consists of a slender glass tube, with a small bore, containing in general mercury or alcohol, which expanding or contracting by variations in the temperature of the atmosphere, or on the instrument being brought into contact with any other body, or immersed in a liquid or gas which is to be examined, the state of the atmosphere, the body, liquid, or gas, with regard to heat, is indicated by a scale either applied to the tube or engraved on its exterior surface. The ordinary thermometer consists of a small tube, terminating in a ball containing mercury, the air having been expelled and

the tube hermetically sealed. There are two points on the scale, corresponding to and determinate temperatures, one, namely, to the temperature of freezing water, and the other to that of boiling water. In the thermometer commonly used water. In the thermometer commonly used in this country, that of Fahrenheit, the former point is marked 32° and the latter 212°, hence the zero of the scale, or that part marked 0°, is 20° below the freezing-point, and the interval or space between point, and the interval or space between the freezing and boiling points consists of 180°. The zero point is supposed to have been fixed by Fahrenheit at the point of greatest cold that he had observed, probably by means of a freezing-mixture such as snow and salt. On the Continent particularly in by means of a freezing-mixture such as snow and salt. On the Continent, particularly in France, and nowadays in all scientific investigations, the Centigrade thermometer is used. The space between the freezing and boiling points of water is divided into 100 equal parts or degrees, the zero being at freezing and the boiling-point at 100°. Réaumur's thermometer, which is in use in Germany, has the space between the freezing and boiling points divided into 80 equal parts, the zero being at freezing. The following formulæ will serve to convert any given number of degrees of Fahrenheit's scale into the corresponding number of descale into the corresponding number of degrees on Réaumur's and the Centigrade scales, and vice versat. Let F, R, and C (the 0° of C. and R. being equal to F 32°, and the 0° of C. and R. being equal to F. 32°, and the three scales from freezing to boiling point being F. 180°, C. 100°, R. 80°, or in the ratio of 9°, 5°, 4°) represent any corresponding numbers of degrees on the three scales respectively, then: $(F. -32^\circ) \times \S = R$; $(F. -32^\circ) \times \S = C$; $R. \times \S + 32^\circ = F$; $C. \times \S + 32^\circ = F$; $C. \times \S + 81^\circ =$ the other hand, spirit of wine is not adapted to high temperatures, as it is soon converted into vapour, whereas mercury does not boil till its temperature is raised to 660° F. Mercury is most commonly used for thermome-ters employed for indicating all ordinary ters employed for indicating all ordinary temperatures. For recording extremely high temperatures the pyrometer is used; and for indicating very slight variations the thermo-electric battery is employed. As the ordinary thermometer gives the temperature only at the time of observation, the necessity for having an instrument which would show the meritum and minimum. would show the maximum and minimum temperatures within a given period is easily apparent in all cases connected with me-teorology, and various forms of instruments for this purpose have been invented. A common form of maximum thermometer consists of the ordinary thermometer fitted with a piston which moves easily in the tube. The instrument is placed horizontube. The instrument is placed horizontally, and the piston is pushed along the bore as the mercury advances, and is left at the highest point by the retiring fluid. This point is noted by the observer, who then erects the thermometer, causing the piston to sink to the mercury, the instrument thus being in condition for a fresh experiment. A similar action takes place in the spirit of wine minimum thermometer, the small movable piston being, however, immersed in the fluid and drawn back by the convex surface of the contracting fluid, being left at the point of greatest contraction. The maximum and minimum instruments commaximum and minimum instruments com-bined form the register or self-registering thermometer.—Chromatic thermometer, an arrangement of glass plates devised by Sir David Brewster, exhibiting the difference between their temperature and that of an object with which they are brought in con-tact by the different hues of the polarized light produced in the plates.—Differential thermometer. Thermometric, Thermometrical (thermometrik, thermometrikal), a. 1. Pertaining to a thermometer; as, the thermometerical scale or tube. —2. Made by a thermometer; as, thermometrical observations. Thermometrically (ther-mo-met/rik-al-li), adv. In a thermometrical manner; by means of a thermometer.

means of a thermometer.

Thermometrograph (the metro, read),

n. [Gr. therme, heat, metron, measure, and graphs, to write.] A self-registering thermometer, especially one that registers the maximum and minimum degrees of temperature and minimum degrees of temperature and minimum degrees of temperature. perature during long periods.

Thermo-multiplier(ther-mo-mul'ti-pli-er), n. An apparatus consisting of a thermo-electric pile and a galvanometer combined. See under THERMO-ELECTRICITY.

Thermo-pile (ther'mo-pil), n. Same as Thermo-electric Battery or Pile. See under THERMO-ELECTRICITY

Thermoscope (thermo-skop), n. [Gr. therme, heat, and skopeo, to see.] An instrument by which changes of temperature are indiof the modification of the air thermometer, called by Leslie a differential thermometer, was claimed by Count Rumford as one of his own inventions, under the ford as one of his own inventions, under the name of thermoscope. See DIFFERENTIAL. Thermoscopic, Thermoscopical (thermoscopic the thermoscope; as thermoscopic and by means of the thermoscope; made by means of the thermoscope; as, thermoscopic observations. Thermostat (thermostat), a. [Gr. thermosheat, and states, standing.] A self-acting apparatus for regulating temperature. A thermostat was contrived by Dr. Ure for regulating temperature in the processes of distillation and vaporization in baths, hothouses, in adjusting the heat of stoves and houses, in adjusting the heat of stoves and furnaces, &c. It operates upon the princi-ple that when two thin metallic bars of different degrees of expansibility are riveted or soldered faceways together, any change of temperature will cause the compound bar to hend, the side on which the least expansible bar is becoming concave, and the other convex. These flexures are made to operate in regulating valves, stop-cocks, stove-registers, &c., and thereby to regulate the flow of heated liquids, or the admission

or emission of air.

Thermostatic (ther-mo-stat'ik), a. Pertaining to the thermostat.

taining to the thermostat.

Thermo-tension (thermo-ten'shon), n.

Lit. a stretching by heat; specifically, a process of increasing the direct cohesion of wrought iron, consisting in heating the metal to a determinate temperature, generally from 500° to 600° F, and in that state giving to it, by appropriate machinery, a mechanical strain or tension in the direction in which the strain is afterwards to be exmechanical strain or tension in the affection in which the strain is afterwards to be exerted. The degree of tensile force applied is determined beforehand by trials on the same quality of metal at the ordinary tension. perature, in order to ascertain what force would, in that case, have been sufficient to break the piece which is to be submitted to thermo-tension.

Thermotic, Thermotical (thermot'ik, thermot'ik, al), a. [From Gr. thermos, warm.] Of or relating to heat; resulting from or dependent on heat. 'This revolutionary thermotic discovery.' Huxley.

The doctrines of this kind which we have to notice refer principally to the effect of the sun's heat on the earth, the laws of climate, the thermolical condition of the interior of the earth, and that of the planetary spaces.

Thermotics (ther-motiks), n. The science

of heat.

I employ the term thermotics to include all the doctrines respecting heat which have hitherto been established on proper scientific grounds.

Whenvell.

Thermotype (ther motip), n. [Gr. therme, heat, and typos, impression.] A picture-impression, as of a slice of wood, obtained by first wetting the object with dilute acid, as sulphuric or hydrochloric, then printing it, and afterwards developing the impression by heat

You shall leave this to-morrow. Since he left this, . . . he never as much as bestowed a thought upon us.

Lever.

4. This is used as opposed or correlative to that. This refers to the nearest person or thing: that to the most distant. Frequently, however, this and that denote reference indefinitely,

Two ships from far making amain to us,
Of Corinth that of Epidaurus this,
Shak, This way and that the wav'ring sails they bend.

A body of this or that denomination is produced.

When this and that refer to different things before expressed, this refers to the thing last mentioned, and that to the thing first mentioned. See THESE, THAT.

Their judgment in this we may not, and in that we need not follow Hooker.

It is sometimes opposed to other.

Consider the arguments which the author had to write this, or to design the other, before you arraign him.

Thisness (This'nes), n. The state or quality of being this; heeceity. Thistle (this'1), n. [A. Sax. thistel, Icel. thistill, G. and D. distel, Sw. tistel, Sc. thrissle, thistle. Origin doubtful.] The common name of prickly plants of the tribe Cynaraceæ, nat. order Compositæ. The genus Carduus with its sub-genera Cirsium or Cnicus. and Silybum contains the greatest number of those commonly recognized. There are numerous species, most of which are inhabinumerous species, most of which are limani-tants of Europe, as the musk-thistle (Car-duus nutans), milk-thistle (C. Marianus), welted thistle (C. acanthoides), slender-flow-ered thistle (C. tenuiforus), the spear-thistle (Cnicus lanceolatus), and field thistle (Cuicus arrensis), a well-known plant, very trouble-some to the farmer. The blessed thistle (Carduns benedictus) of the pharmacopeias, Cnicus benedictus or Cirsium benedictum of modern botanists, is a native of the Levant,

and is a laxative and tonic medicine. The name thistle is also given to numerous prickly plants belonging to other genera, as the cotton-thistle belongs to the genus Onopordum. The common cotton-thistle Onopordum. The common cotton-thistic (O. Acanhium) attains a height of from 4 to 6 feet. It is often cultivated as the Scotton thistle, but it is doubtful whether the thistle which constitutes the national badge has any existing type, though the stemless thistle (Cricus acaule) is in many districts of Scotland looked on so the true Scotch thistle. The certina as the true Scotch thistic. The carline thistile belongs to the genus Carlina; the star-thistie is the Centaurea Calcitrapa. The sow-thistle belongs to the genus Sonchus, and the globe-thistle to the genus Echinops. Some species of the thistile are chins, and the globe-thistic to the Echinops. Some species of the thistic are admitted into gardens, where they form a pretty variety for borders. Thisties sow themselves extensively by means of their winged seeds, and hence they are great pests to the farmer. The thistie seems to have been a national emblem in Scotland in the time of James III., and it was evidently well known as such when Jumbar wrote his poem of the 'Thistle and the Rose' (1503).—Order of the Thistle, a Scottish order of knighthood, sometimes called the order of St. Andrew.

It was instituted by James Scotland in 1687, when of St. Andrew. It was instituted by James VII. (James II. of England) in 1687, when

Thrashing, Threshing (thrash'ing, thresh'ing), n. 1. The operation by which grain is separated from the straw. This operation is performed in various ways, as by the feet of animals, by a fiail, or by a thrashing-machine. The first mode was that employed in the ages of antiquity, and it is still practised in the south of Europe, and in Persia and India. Oxen were generally employed for this purpose, either alone or with the and India. Oxen were generally employed for this purpose, either alone or with the addition of a kind of roller studded with iron knots, which the oxen dragged over the corn-sheaves, which latter were spread on a circular floor in the form of a circle, the ends containing the grain being placed towards the centre. Thrashing by the fiall is still practised in various parts of this and other countries, but thrashing-machines have been very extensively introduced, which effect a great saving in time and labour to the farmer.—2. A sound drubbling. Thrashing-floor (thrashing-floor), n. A floor or area on which grain is beaten out. Section of Scotch Thrashing-machine

Meikle, a millwright in East Lothian, about the year 1776. Since that time it has undergone various other improvements. The cut shows in section a machine of this kind as at present constructed. The principal feature is the three rotatory drums or cylinders, ture is the three rotatory drums or cylinders, which receive motion from a water-wheel, or from horse or steam power. The first drum which comes into operation has projecting ribs called beaters on its outer surface, parallel to its axis. This drum receives a very rapid motion on its axis. The sheaves of corn are first spread out on a slanting table, and are then drawn in with the ears foremost between two feeding rules with or corn are inst spread out on a sianting table, and are then drawn in with the ears foremost between two feeding rollers with parallel grooves. The beaters of the dram act on the straw as it passes through the rollers, and beat out the grain. The thrashed straw is then carried forward to two successive drunns or **shakers**, which, being armed with numerous spikes, lift up and shake the straw so as to free it entirely from the loose grain lodged in it. The grain is made to pass through a grated floor, and is generally conducted to a winnowing-machine connected by gearing with the thrashing-machine itself, by which means the grain is separated from the chaff. Improved machines on the same principle, many of them portable, are extensively used in England and America, those of the latter country being in particular very light and effective. The portable steam thrashing-machine now common in England and in many parts of Scotland has no feadur-rollers the corn common in England and in many parts of Scotland has no feeding-rollers, the corn being fed direct to the first drum, which being fed direct to the first drum, which revolves at a very high speed and separates the grain by rubbing against a grating fitted around the drum rather than by direct beating. It gets through far more work than the ordinary stationary mill. With a portable engine the machine can be moved from field to field, and also from farm to farm, thus being capable of performing the thrashing-work of a wide district for the whole season. The owner, by hiring it out, can therefore soon recoup himself for the high price of this machine as compared with high price of this machine as compared with the fixed mill.

The sound which follows a flash of lightning; a report due to the sudden disturbance of the air produced by a violent discharge of atmospheric electricity or lightning. The character of the sound varies with the force and the disby a violent discharge of atmospheric elec-tricity or lightning. The character of the sound varies with the force and the dis-tance of the discharge and the nature of the surrounding country, and is no doubt affected by the relative positions of the clouds. A person in the immediate neigh-bourhood of a flash of lightning hears only one sharp report, the sharpness being greatly intensified when an object is struck by it. A person at a distance hears the same report as a prolonged peal, and persons in situations at some distance apart hear it each in a different way. These differences have not yet been satisfactorily accounted for; the long rolling effect may be due to echoes from the clouds, and partly perhaps to there being a number of partial discharges from the same cloud at different distances from the ob-A person at a distance hears the same report cloud at different distances from the observer. As sound travels at the rate of 1100 feet per second, while the passage of light is almost instantaneous, the distance of the observer from the discharge may be approximately estimated by dividing the interval in seconds between the flash and the report by 5 or 4.8, the product being the distance in miles to the place of discharge. Thunder has never been heard 20 miles from the flash. 2. The destructive agent in a thunder-storm; a discharge of lightning; a thunderbolt.

An extremely venomous snake, a native of India, Ceylon, &c., sometimes called also Katuka, of the genus Daboia (D. elegans) and family Viperide, much dreaded by the natives. The word tic-polonga signifies spotted polonga, the latter word being a kind of generic title given by the natives to many serpents, no less than eight species being classed under this common title. It is said that the tic-polonga and the cobre are deadly that the tic-polonga and the cobra are deadly enemies; and to say that two people hate each other like the tic-polonga and cobra each other like the tic-polonga and cobra is equivalent to our prover respecting the cat and dog. The tic-polonga is said always to be the aggressor, to seek the cobra in its hiding-place, and to provoke it to fight. There are many native legends in Ceylon respecting the ferocity of this snake.

2. The alternate rising and falling of the waters of the ocean, and of bays, rivers, &c., connected therewith. The tide appears as a general wave of water, which gradually elevates itself to a certain height, then as gradually sinks till its surface is about as much below the medium level as it was before above it. From that time the wave

again begins to rise; and this reciprocating motion of the waters continues constantly, with certain variations in the height and in the times of attaining the greatest degree of height and of depression. The alternate rising and falling of the tide-wave are obrising and falling of the tide-wave are observed to take place generally twice in the course of a lunar day, or of 24h. 49m. of mean solar time, on most of the shores of the ocean, and in the greater part of the bays, firths, and rivers which communicate freely with it. The tides form what are called a food and an ebb, a high and low water. The whole interval between high and low water is often called a field. high and low water is often called a tide; nigh and low water is often caused a tide; the water is said to flow and to ebb; and the rising is called the flood-tide, and the falling the ebb-tide. The rise or fall of the waters, in regard to elevation or depression, is ex-ceedingly different at different places, and is also variable everywhere. The interval between two succeeding high-waters is also variable. It is shortest about new and full warnable. It is shortest about new and unimoon, being then about 12h. 19m.; and about the time of the moon's quadratures it is 12h. 30m. But these intervals are somewhat different at different places. The chief cause of the tides is the attraction of the moon, which, affecting most strongly the side of the earth nearest to it, draws or heaps up the waters in the parts of the earth successively turned towards it. At the same time the moon attracts the bulk of the earth, and, as it were, pulls the earth away from the water on the surface farthest from it; so that here also the water is raised, although not quite so much as on the nearer side. The waters being thus heaped up at the same time in these two opposite parts of the earth, and the waters situated half-way between them being thus situated nair-way between them being thus necessarily depressed, two high and two low tides occur in the period of a little more than one revolution of the earth on its axis. The accompanying cut gives a theoretical view of the effect of the moon's at-On the tidal wave caused by the traction.

moon must be superposed that caused by the attraction of the sun, a wave of far in-ferior volume. When the sun and moon are ferior volume. When the sun and moon are in conjunction or opposition, at times of new and full moon, their tidal waves will be superposed crest upon crest, and the effect will be what is called a spring-tide; when they are in quadrature the lunar tide will be partially neutralized by the solar tide, and the result is a neap-tide. (See also TIDE-WAVE.) The above explanation assumes that the earth is spherical and uniformly covered with water, and the corrections to be made in consequence of the inaccuracy of these assumptions have occupied the attention of scientists since the time of Newton. The tides being of great importance to all commercial nations, it becomes an object of great importance to obtain the means of predicting them; but the subject, in a genpredicting them; but the subject, in a general point of view, is attended with many difficulties, and each place requires to have its own tide-tables. See Establishment of the port under ESTABLISHMENT.—Acceleration and retardation of the tides. See under ACCELERATION.—Atmospheric tides. Tidology (ti-dol'o-ji), n. [A hybrid word from E. tide, and Gr. logos, doctrine, discourse.]
The doctrine, theory, or science of tides.

The doctrine, theory, or science of tides.

No one doubts that tidology (as Dr. Whewell proposes to call it) is really a science. As much of the henomena as depends on the attraction of the sun and moon is completely understood, and may in any even unknown, part of the earth's surface, be forestold with certainty; and the far greater part of the phenomena depends on those causes. But circumstances of a local or casual nature, such as the configuration of the bottom of the occan, the degree of confinement from shores, the direction of the wind, &c., influence, in many or in all places, the height and time of the tide.

7. S. Mill.

1. A carnivorous animal of

Bengal Tiger (Felis tigris).

the genus Felis, F. tigris (sometimes classified as Tigris regalis), family Felidæ. The tiger is about the height of the lion, but the body is longer, and the head rounder. It is of a lively fawn colour above, a pure white below, irregularly crossed with black stripes. It is clothed with short hairs, and has no mane. White or albino varieties have been occasionally met with, a specimen having been shown in this country in 1820. The tiger attains his full development in India, the name of Bengal tiger being used as synonymous with those specimens which appear as the most typical and most powerful representatives of the species. The animal is spread over a large area of Southern Asia, and is also found in Java and Sumathe genus Felis, F. tigris (sometimes classi-Asia, and is also found in Java and Suma-tra. In habits the tiger is far more active and agile than the lion, and exhibits a large amount of flerce cunning. He generally pitches upon a concealed spot near a water course as a habitat, and springs upon the animals that approach to drink, slinking back to his lair as if discomfited and ashamed should his first bound be unsuccessful. His back to his lair as if discomfited and ashamed should his first bound be unsuccessful. His tread through the thick jungle is noiseless and stealthy, and he appears to avoid rather than court danger, unless when brought to bay, when he turns an appalling flerce front to the foe. These animals do not generally readily attack man himself, but in some cases they seem to acquire a special liking for human prey, and boldly approach villages for the purpose of securing it; such being known as 'man-eaters.' The natives destroy them by traps, pits, poisoned arrows, and other means. Tiger hunting is a favourite Indian sport. It is pursued generally by Europeans, the tiger being shot from the back of an elephant. When taken young the tiger can be tamed, and tigers thus domesticated are not rarely to be seen in India. The name American tiger is frequently applied to the jaguar (Felis onca). (See JAGUAR.) Hence-2. A person of a flerce, bloodthirsty disposition.—3. G. zimbar, wood, edifice: Mod.G. zimmer, an apartment, zimmerholz (lit. timberwood), timber, zimmermann, a carpenter. The oldest meaning seems to have been structure, edifice, as in O. Sax. timbar, O. Fris. timber, an edifice, and as seen in the different verbs; A. Sax. timbrian, Goth. timiran, Icel. timbra, Dan. tönne, G. zimmern, to build. The root is that of Gr. demō, to build. domos, L. domus, a house (whence domestic, domicile, &c.). Timber therefore means literally building materials, J. 1. Trees cut down, suaraed, or capable of being domestic, domicile, &c.). Timber therefore means literally building materials 1. Trees cut down, squared, or capable of being squared into beams, rafters, boards, planks, &c., for being employed in house or ship building, or in carpentry, joinery, &c. (See Batten, Deal, Planks, Lumber, Timber is generally sold by the load. A load of rough or unhewn timber is 40 cubic feet, and a load of squared timber 50 cubic feet, reckoned to weigh 20 cwt. In regard to planks, deals, &c., the load consists of so many square feet; thus a load of plank more than 1 inch thick equals 600 square feet a load of plank more than 1 inch thick equals 600 square feet divided by the thickness in inches. Wood is a general term, comprehending under it timber, dye-woods, fancy woods, fire-wood, &c., but the word timber is often used in a loose sense for all kinds of felled and seasoned wood.—2. A general term applied to growing trees yielding wood snit-able for constructive purposes. Some of the Coniferæ yield valuable timber, as the different kinds of fir and pine. The great majority of trees valuable as timber, however, are true exogens, as the oak, ash, elm, beech, sycamore, &c., among British trees; the chestnut and walnut among those of the South of Europe; and the mahogany, teak, &c., of tropical countries.

Timburine (tim-bö-ren'), n. A tambourine. Time (tim), n. [A. Sax. ttma, time, hour, season; Icel. ttmi, Sw. and Dan. time; not season; Icel. timi, Sw. and Dan. time; not in the other Teutonic languages; crigin doubtful. Probably of same stem as tide, and the root may be da, as in Skr, dd, to cut, to divide (the d becoming t in accordance with Grimm's law), in which case time might be compared with L tempus, so far as similarity of ideas is concerned, supposing the latter to be from root tem, to cut. 1. The general idea of successive existence; the measure of duration. Time is absolute or relative; absolute time is considered without any relative. solute time is considered without any rela-tion to bodies or their motions. It is con-ceived by us as unbounded, continuous, celved by us as unbounded, constituting, homogeneous, unchangeable in the order of its parts, and divisible without end. Relative time is the sensible measure of any portion of duration, often marked by particular tion of duration, often marked by particular phenomena, as the apparent revolution of the celestial bodies, more especially of the sun, or the rotation of the earth on its axis. Time is divided into years, months, weeks, days, hours, minutes, and seconds; but of these portions the years and days only are marked by celestial phenomena. In order to measure time we employ some equable motion, and we judge those times to be equal which pass while a moving body proceeding with a uniform motion passes over equal spaces. The instruments employed for measuring time are clocks, chronometers, clepsydras, hour-glasses, and dials; proyect for measuring time are clocks, chronometers, clepsydras, hour-glasses, and dials; but the three first are those chiefly used. Time is often poetically personified as masculine. 'The plain bald pate of father Time himself.' Shak.

12. In music, (a) the relative duration of a sound (or rest) as measured by the rhythmical proportions of the different notes, taking the semibreve () as the unit or standard, the minim () being half the semibreve, the

crotchet () half the minim, the quaver () half the crotchet, and so on. Thus, should nair the crotchet, and so on. Thus, should a semilibreve be sounded (say) 8 seconds of time, a minim would occupy 4 seconds, a crotchet 2, a quaver 1, and so on. (b) The style of movement or peculiarity of accent in a composition, such as is marked by the regular crouping of a certain and sound. regular grouping of a certain and equal number of notes, or of more or less notes equal in time value to that certain number, through all the bars of a movement; the different combinations of sounds and values being said to constitute different kinds of time, each indicated by a different rhythmical or time signature. These measures or divisions are of several kinds, but may be all ranged in two classes, duple or binary time and triple or terruary time, the former being marked by two beats and the latter by three beats to the measure or bar. (c) The by three beats to the measure or bar. (c) The absolute velocity or rate of movement at which a piece is executed, as indicated by the English words quick, slow, &c., and the like.—

Tin (tin), n. [A. Sax. D. Dan. and Icel. tin, Sw. ten, G. zinn; comp. L. stannum, zinc, tin; W. ysten, Armor. stean, Ir. stan—tin. Notwithstanding a certain similarity these Notwithstanding a certain similarity messe latter forms may not be connected with the Teutonic.] 1. At. wt. 118. Sym. Sn. A metal of a white brilliant colour, slightly tinged with gray. In hardness it is intermediate between gold and lead; it is very malleable, and may be beaten out into leaves less than the thousandth of an inch in thickTIN

ness. It is more tenacious than lead, and very flexible, and when bent in the fingers it emits a peculiar crackling sound. Its specific gravity is 7 29. It melts at 442°, and if heated to whiteness in air it takes fire and burns with a white flame, forming peroxide of tin. Tin is rather a scarce metal, being found in few places of the world in any quantity. The mines in Cornwall are its most productive source; it also occurs in Bohemia, Saxony, and Spain; in the islands It is more tenacious than lead, and Bohemia, Saxony, and Spain; in the islands of Banca and Billiton, and the Straits Set tlements, in Asia; in Mexico, Chili, Peru, and Massachusetts, in America; and in Australia. There are only two ores of tin: the native binoxide, called tin-stone, and the double sulphide of tin and copper, called tin pyrites. The binoxide of tin, called also cassiterite, is the only ore found in sufficient quantities to make it the object of mineral quantities to make it in collect on limiteral explorations. It occurs in Cornwall in two forms: (1) in veins where it is blended with several other metals, as arsenic, copper, zinc, and tungsten; (2) in loose rounded masses, grains, or sand in alluvial soil, in which state it is called stram-tim. The former, when reduced to the metallic state, former, when reduced to the metallic state, yields block-tin, while the latter yields grain-tin, which is the purer of the two. What is termed wood-tin is found in reniform and botryoidal masses, or in wedge-shaped pieces. Tin pyrites, the other ore of tin, occurs massive, with a granular composition; fracture uneven, imperfectly conchoidal; lustre metallic; colour steel-gray, inclining to yellow; hardness about that of fluor-spar. It contains from 14 to 30 per cent of tin. The Phæmicians, long before the Christian era fetched this metal, under the Christian era, fetched this metal, under the name of kassiteros, from the British the name of kassiteros, from the British islands, which were thence called Cassiteriates, or islands of tin. Oxygen combines with tin, forming protoxide of tin or stansous oxide (SnO, sesquioxide (SnO,), and dioxide or stannic oxide (SnO). The compounds of chlorine with tin are dichloride or stannous chloride (SnCl), sesquichloride or stannous chloride (SnCl), sesquichloride or stannous chloride (SnCl), and tetrachloride or stannic chloride (SnCl), and of sulphur with it, the protosulphide or stannous sulphide (SnS), sesquisulphide (SnS), and the disulphide or stannic sulphide (SnS). The uses of tin are numerous. It is much used as a covering to several other metals, as in tin-plate and cooking It is much used as a covering to several other metals, as in tin-plate and cooking vessels of copper. Combined with copper it forms bronze, bell-metal, and several other useful alloys. With lead it forms powter, and solder of various kinds. Tin-foil coated with mercury forms the reflecting surface of glass-mirrors. The solutions of tin in the nitric, muriatic, nitro-sulphuric, and tartaric acids are much used in dyeing. 2. 2. In animal anat, the texture or grouping of anatomical elements of which the systems of organs are composed; the primary layers composing any of the parts of animal bodies. The classification of tissues may now be said to be arranged on two different principles, having reference either to special histology, which concerns itself with the structure of organs in which a combination of various tissues may enter; or to general histology, which treats of the tissues properly so called. Hence, under the first arrangement we speak of muscular tissue, or rangement we speak of muscular tissue, or fesh; osecous tissue, or bone; adipose tissue, or fat; cartilaginous tissue, or gristle; pigmentary tissue, or colouring matter seen in the skin, in the choroid coat of the eye, the iris, &c.; areolar, cellular, or connective tissue, widely distributed in every part of the body, and serving to bind together and consolidate other parts and tissues. According solidate other parts and tissues. According to the second system of grouping we have, (a) cellular tissue, which consists entirely of cells, in which cell lies close to cell, such as occur in the epidermis, nails, the epithelium, or living membranes of the inner surfaces of the body, &c.; (b) connective tissue, in which one cell is regularly separated from the others by a certain amount of intermediate or intercellular substance, as exemplified in cartilage, fat, &c.; (c) more highly developed tissues in which the structures are usually more or less tubular; this group including the muscles, nerves, and vessels, and, in Virchow's arrangement, the blood. It is to be observed that though the terms in the two classifications may have a correspondence in name, the correspondence does not extend strictly to the nature of the tissues to which they are applied. The terms adventitious, accidental, or pathological tissue have been applied generally to morbid productions resembling any of the natural or physiological tissues. The belief is galining currency that every pathological tissue has its physiological or normal prototype, and that the abnormality consists either in its production at the wrong place or time, or to an excessive extent.—

3. In vegetable anat, the minute elementary structures of which the organs of plants are composed. These elementary structures differ from each other, and are so minute as generally to be distinctly visible only with the aid of the microscope. They are named elementary organs, organic tissue, or occur in the epidermis, nails, the epitheli-um, or living membranes of the inner sur-

vegetable tissue. When a leaf or a portion of the stem of one of the higher plants is submitted to the microscope it is found to consist, (1) of a thin transparent homogeneous membrane, which is arranged in the form of cells or cylindrical tubes; (2) of fibres which are arranged in a spiral form in the interior of the cells or tubes; and in the interior of the cells or tubes; and (3) of a fluid, filling the cells, and existing between them, and containing in it globules of various sizes and kinds. These parts constitute what are known respectively as elementary membrane, elementary fibre, and organic mucus. The elementary fibre is only found in the higher forms of plants, the containing the contai the other two are found in all plants. tissues of plants then are composed of elementary membrane and elementary fibre, and the principal forms under which they

exhibit themselves constitute the cellular tissue, fibrous tissue, and vascular tissue. Cellular tissue, often called parenchyma, is composed of membrane in the form of cells or cavities which are closed on all sides, and are commonly of a spheroidal form, although they often assume various other forms. The they often assume various other forms. The pith of plants is entirely composed of cellular tissue, but it enters largely into the structure of other parts, and in many, as in the mushroom and sea-weed orders, is the only tissue. Fibrous tissue is that in which the elementary fibre alone is apparent. When the cells are composed of membrane real axiral flux complined, or of flire slone. when the cells are composed of membrane and spiral fibre combined, or of fibre alone (as in some instance when the membrane appears to have been absorbed during growth), they constitute the fibro-cellular tissue. Vascular or tubular tissue is comtissue. Vascular of thomas tissue is composed of very elongated membranous tubes, tapering at each end. It comprehends the woody (also called prosenchyma) and laticiferous tissues. When the tubes have within them a spiral fibre, or their walls marked with broken spiral lines or dots, arranged in a circular or spiral direction, they constitute fibro-vascular tissue.—4. Titania (tī-tā'ni-a), n. The land and consort of Oberon. The queen of Fairy-

land and consort of Oberon.

The Shakspearean commentators have not thought fit to inform us why the poet designates the Fairy-queen Titania. It, however, presents no difficulty. It was the belief of those days that the Fairies were the same as the classic Nymphs, the attendants of Diana. . . The fairy-queen was therefore the same as Diana, whom Ovid (Met. iii. 173) styles Titania. Stignation of the Titanian, Titanitic (ti-tanian, an, ti-ta-nitik), as Pertaining to titanium.

Sym. Ti. At. wt. 50. A metal discovered by Gregor in 1791, in a black sand in Cornwall. Gregor in 1791, in a black sand in Cornwall. It was afterwards discovered by Klaproth in some other minerals, and he gave it the name it now bears. In 1822 Wollaston examined it, and ascertained its properties. It is found combined with oxygen in several minerals, and occurs occasionally in combination with nitrogen in the slag ironworks as small cubical crystals, exactly similar to bright copper in appearance, of specific gravity 5.3, and very infusible. When heated with nitre these crystals are oxidized, producing titanic acid. Titanium is a dark green, heavy, amorphous powder. Oxygen and titanium combine, forming the sesquioxide Tl₂O₃, which is a black powder, and the peroxide combine, forming the sesquioxide 11₂0₃, which is a black powder, and the peroxide or titanic acid, TiO₂. Titanium also combines with chlorine, forming two chlorides, TiCl₃ and TiCl₄, and with sulphur forming a sulphide, TiS₂. This metal forms several compounds with nitrogen. The ores of this metal are called menachanite, from Menametal are called menachanite, from Menachan in Cornwall, where it was originally found; iserine, from the river Iser, in Silesis; nigrine, from its black colour; sphene, rutile, brookite, axotomous iron, crichtonite, ilmenite, mohsite, æschynite, greenovite, and octahedrite or anatase. — Titanium, green, ferrocyanide of titanium, precipitated by ferrocyanide of potassium from a solution of titanic chloride, recommended as an innocuous substitute for Schweinfurt-green and other arsenical green pigments. The colour, however, is far inferior to that of Schweinfurt-green.

Tobacco (tō-bak'kō), n. [Perhaps from Tabaco, a province of Yucatan, in Spanish America, where it is said to have been first found by the Spaniards. But this is very doubtful. Las Cass says that in the first voyage of Columbus the Spaniards saw in Cuba many persons smoking dry herbs or

leaves rolled up in tubes called tabacos. Charlevoix, in his History of St. Dominique, says that the instrument used in smoking was called tabaco, and hence the name, and was called aboats, and hence the haine, and Humbold adopts this view. In Hakluyt's Voyages, 1689, it is stated that 'there is an herbe (in Virginia) which is sowed apart by itself, and is called by the inhabitants uppowood; in the West Indies it hath divers names, tooc: In the west indies it nath divers names, according to the severall places and countries where it groweth and is used. The Spaniards call it tabacco.'] A genus of plants (Nicotlana), mostly herbaceous, but some shrubby, nat. order Solanacese, natives of the

warmer parts of America, Eastern Asia, and Australia. There are several species, all narcotic. Those most generally cultivated are N. Tabacum and N. macrophylla, the former being often called Virginian to-bacco. It is of an erect habit, and grows to the height of 5 or 6 feet, having lanceolate leaves from 6 to 18 inches long, and rose-col-oured flowers. Besides being used as the name of the plants tobacco is also the name of the prepared leaves. To-bacco has been employed in medicine as a stimulant, emetic, and purgative, but it is as a luxury

that its use is so widely diffused, the chief modes in which widely diffused, the chief modes in which it is taken being smoking, snuffing, and chewing. The leaf undergoes various pro-cesses of manufacture in accordance with the mode in which it is to be used. Its use in America is of unknown antiquity. Among the North American Indians smoking has from time immemorial been regarded almost as a religious vite the call met being asseas a religious rite, the calumet being associated with their most solemn and important ciated with their most solemn and important transactions. Meyen states that its use in China is also of high antiquity. It was first introduced into Europe in 1559 by Hermandez de Toledo, who brought a small quantity from America into Spain and Portugal. Thence its use forthwith spread into France and Italy, its first employment in these countries being in the form of snuff. Sir F. Drake introduced it into England in 1885. where tobacco taverns became nearly 1585, where tobacco taverns became nearly as prevalent as beer-shops. Its use was opposed strongly by both priests and rulers.
Popes Urban VIII. and Innocent IX. issued buils excommunicating such as used snuff in church, and in Turkey smoking was made a capital offence. In the canton of Berne the capital offence. In the canton of Berne the prohibition of the use of tobacco was put among the ten commandments immediately after that forbidding adultery. The Counterblast of James I. of England is matter of history. All prohibitions, however, regal or priestly, were of no avail, and tobacco is now the most extensively used luxury on the face of the globe. The most commonly used to-bacco, and possibly the most esteemed, is the bacco, and possibly the most esteemed, is the Virginian, but fine species or varieties are grown also in Cuba, Persia, and elsewhere. Toleration (tol-ér-ä/shon), n. [L. toleratio, from tolero. See Tolerate.] 1. The act of tolerating; allowance given to that which is not wholly approved. Toleration of fortune of every sort. Sir T. Elyot. 'The indulation of the semen' to these men' gence and toleration granted to these men. South. Specifically—2. The recognition of the right of private judgment in matters of the right of private judgment in matters of faith and worship; also, the liberty granted by the governing power of a state to every individual to hold or publicly teach and defend his religious opinions, and to worship whom, how, and when he pleases, provided that he does not thereby violate the rights of others or infringe laws designed for the protection of decency, morality, and good order, or for the security of the governing power; the effective recognition by the state of the right which every person has to enjoy the benefit of all the laws and of all social privileges without any regard to difference of religion.

Toleration is of two kinds; the allowing to dissenters the unmolested profession and exercise of their religion, but with an exclusion from offices of trust and emolument in the state, which is a partial toleration; and the admitting them without distinction to all the civil privileges and capacities of other citizens, which is a complete toleration. Patry.

So natural to mankind is intolerance in whatever

they really care about, that in the minds of almost all religious persons, even in the most tolerant countries, the duty of loteration is admitted with tact reserves. One person will bear with dissent in matters of Church government, but not of dogma; another can tolerate anybody short of a Papist or a Unitarian; another, every one who believes in revealer eligion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuie and intense, it is found to have abated little of its claim to be obeyed.

7. S. Mill.

Dr. Blair.

4. In music, (a) the impression on the ear made by the undulations of the atmosphere, &c., produced by the vibration of a string or other sonorous body; a musical sound. or other sonorous body; a musical sound. Nearly every musical sound is composite, that is, consists of several simultaneous tones having different rates of vibration according to fixed laws, which depend on the nature of the sonorous body and the mode of producing its vibrations. The simultaneously sounding components are called partial tones; that one having the lowest rate of vibration and the loudest sound is termed the arring, wrincingl or fundamental lange. the prime, principal, or fundamental tone; the other partial tones are called harmonics or overtones. Thus a single string produces not only its own prime or fundamental tone, but also its octave, twelfth, fifteenth (double octave), seventeenth, nineteenth, &c., or the sounds belonging to $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{6}$, &c., of its length. Fut in somewhat different and simpler words, the fundamental tone may be said to generate the other two tones of the major triad or common chord; that is, the third and the fifth, or their octaves, itself being the tonic or key-note. The quality of any sound (-timbre) is due partly to the presence or absence of overtones or harmonics in this series, and partly to the greater or less intensity of those present as compared with the fundamental tone and with one another; sounds composed of the above six elementary tones being rich and sweet. Under certain conditions it is found that two notes when sounded together produce by their combination other notes, which are not found as constituents of either: octave), seventeenth, nineteenth, &c., or the which are not found as constituents of either; these are called resultant tones, and are of two kinds: difference tones and summation tones. A difference tone has a frequency of vibration which is the difference of the frequencies of its components; a summation tone has a frequency of vibration which is the sum of the frequencies of its components. As the components may either be fundamental tones or overtones, two notes which are rich in harmonics yield by their combination a large number of resultant tones. The difference tones were observed which are not found as constituents of either tones. The difference tones were observed in the last century by Tartini, and have been therefore called *Tartini tones*. (b) One of The difference tones were observed therefore called Tartini tones. (b) One of the larger intervals between certain con-tiguous notes of the diatonic scale; as, the major tones, or intervals of 9 commas be-tween C-D, F-G, and A-B; the minor tones, or intervals of 8 commas between D-E and G-A. The smaller intervals of 5 commas between E-F and B-C are called semitones. The terms tone and semitone are also applied to the artificial intervals adopted in the temperament of fixed-toned instruments. (See TEMPERAMENT.) (c) The peculiar quality of sound of any voice or instrument; timbre: as, a mellow or rich tone; a poor or thin tone; a reedy tone. [Note. The regrettable use of the word tone both for a sound, and for the interval between two sounds or and for the interval between two sounds or tones, is confusing, but has been hitherto common, indeed almost universal, among musicians of the highest standing.]—5. That state of a body in which the animal functions are healthy and performed with due vigour; the state in which all the parts and covern have due transfer or the wall structure. organs have due tension or are well-strung; the strength and activity of the organs, from which proceed healthy functions.—6. the leading features of which are as follows: As of the two relations of musical sounds, those of pitch and key, the latter is of tran-scendent importance, every means should be taken to impress this fact on the mind and ear of the learner. Any diatonic scale is a natural scale, whether it is founded on the key of C, D, E, or on any other tone thus represented by a letter-name in the ordinary the key of C. D. E or on any other tone thus represented by a letter-name in the ordinary notation. The tonic or key-note of the scale is always called doh, the second ray, the others me, fah, soh, lah, te, successively, no matter what the absolute pitch of the sound may be, the initials only being ordinarily used in printed music: thus, d, r, m, f, s, l, t. To designate a sound of absolute pitch, the tonic-solfaist uses the first seven letters of the alphabet just as the followers of the other musical system do. Time and accent are marked thus, |:|, or |::|, or |::|, &c:; the space between the lines and dots indicating the or | : : |, or | : | : |, &c. ; the space between the lines and dots indicating the between the lines and dots indicating the aliquot parts of the bar (the beat or pulse), the line showing the strong accent, the short line the medium accent, and the colon the weak accent. Accidental or chromatic tones are indicated by a change in the vowel sounds of the syllables; thus, doh, ray, fah, &c., when sharpened become de, re, fe, &c.; and me, te, &c., flattened become ma, ta, &c. The higher octaves are marked d', r', m', &c., the lower d, r, m, &c. The last two lines of the psalm tune French would therefore be printed r., m., &c. The last two lines of the psalm tune French would therefore be printed thus:---

Tonnage (tun's), n. [From ton.] 1. The weight of goods carried in a boat or ship.—2. The cubical content or burden of a ship in tons; the number of tons a ship can

carry with safety; the gauge of a vessel's dimensions estimated by measurements legalized in different countries. Up to 1836 the usual mode of reckoning tonnage was to multiply the length of the ship by the breadth, assume the depth to be the same as the breadth, multiply by this assumed depth, and divide the product by 94, the quotient being the tons burden. But this mode was found to be both misleading and dangerous; for as harbour and light dues, towage, &c., were charged according to tonnage, shipowners had their vessels built so deep and narrow that they were often unseaworthy. An improved system built so deep and narrow that they were often unseaworthy. An improved system was, therefore, introduced by an act of 1835, which again was strengthened and modified by the Merchant Shipping Acts of 1854 and 1894. This system takes into account not only the depth of the vessel, but also makes allowance for the varying curvature of the hull. The depth from the deck to the bottom of the hold is taken at different ulaces, and the breadth is measured ferent places, and the breadth is measured at different elevations in the depth. The at different elevations in the depth. The total capacity in cubic feet ascertained in this way is divided by 100, and the result is the 'register tonnage'. If the vessel is a steamer, an allowance is made for the space occupied by the engine-room, boilers, coalbunks, &c. In vessels with a poop on the upper deck, the tonnage of this poop space must be added to the ordinary tonnage. It is often roughly assumed that 40 cubic feet of space are required to stow a ton of freight. is often roughly assumed that 40 cubic feet of space are required to stow a ton of freight.

Topic (top'lk), n. [Fr. topiques, subjects of conversation, from L. topica, Gr. topika (pl.), the name of a work by Aristotle on the subject of topoi or commonplaces, from topos, ject of topoi or commonplaces, from topos, a place, a commonplace, a topic (whence topography).] 1. In rhet, a general truth or statement applicable to a great variety of individual circumstances; a general maxim or dictum regarded as being of use in argument or oratory; thus, the proverbial 'a man is known by the company he keeps' is a kind of topic. Among the helps employed by the ancients in their favourite study of rhetoric was the collection and arrangement of a great variety of general truths or axioms, according to the several sciences or subjects to which they belonged. These the Greeks called topoi, or places, or commonplaces, and considered that they might be advantageously used by public speakers in the selection and invention of arguments. The word was also used in the sense of a general head or department of thought to which any maxim belongs.

These topics, or loci, were no other than general ideas applicable to a great many different subjects, which the orator was directed to consult in order to find out materials for his speech.

*Dr. Blair**.

when irritated. The family is distinguished when irritated. The family is disanguished by the body being rounded in front, the back being also round and destitute of scales. The tail fin is three-cornered in shape, and the teeth are pointed; the edges of the spiracles or breathing apertures are serrated. The torpedoes occur in typical perfection

in the Mediterranean (including the common torpedo or Torpedo vulgaris, and T. narke) and in the Indian and Pacific Oceans, stray and in the Indian and Pacific Oceans, stray specimens being now and again found on the British coasts. The fish may sometimes measure 4 feet long, and weigh from 60 to 70 lbs. It owes its remarkable electric power to two special organs, which consist of two masses placed on each side of the head, and consisting each of numerous vertical gelatinous columns, separated by membranous septa, and richly furnished with nervous filaments derived from the nervivagi, or eighth pair of nerves, the entire apparatus presenting a resemblance to the voltaic battery. The production of electricity by these fishes is readily enough explicable, on the ground of the conversion of an equivalent of nerve force into electric organ; just as, under other circumstances. organ; just as, under other circumstances. nerve force is converted into motion through nerve force is converted into motion through the muscles. The power of the discharge varies with the health and size of the fish; but there is little doubt of the exceedingly potent nature of the apparatus, especially under excitement. The numbing power of the torpedo was well known to the Greeks and Romans. It also receives the names of Cramp-fish and Numbing-fish.

of Cramp-Jent and a convergence.

The tor-pedo, or crann-fish, came to hand; a fish, if Pliny writes truth, that by hiding itself with mud and dirt catches lesser fish very strangely; for, by his frigidity he benumbs such fish as swim over or lodge near him, and so preys upon them.

2. A term applied to two distinct classes of submarine destructive agents used in war, namely, torpedoes proper, which are pro-pelled against an enemy's ship; and more or less stationary chambers or mines, placed where a hostile vessel would be likely to where a hostile vessel would be likely to come in contact with them. Of the first class, called also offensive torpedoes, there are three principal types: (a) the 'locomotive,' of which the Whitehead is the best known form; (b) the 'towing' torpedo of Captain Harvey; and (c) the 'spar' or 'outrigger' torpedo. The Whitehead, or fish torpedo, may be described as being a cigar-shaped vessel, varying from 14 to 19 feet in length, and from 14 to 16 inches in diameter. It is and from 14 to 16 inches in diameter.

made of specially prepared steel, and is divided into three compartments; the head contains the gun-cotton which forms its charge and the fuse for exploding it when it comes in contact with a vessel. The central part contains the engines by which it is propart contains the engines by which it is propelled, and which are worked by compressed air, a sufficient supply of which for driving the torpedo the required distance is stored in the third, or tail compartment. The propeller is a three-bladed screw, which can move the largest sized torpedoes at a speed of 24 knots for the distance of 220 yards, the distance of 1000 vertes being recepted; at distance of 1000 yards being reached at a slower rate of progress. By means of a horizontal balance rudder it can be made nonzonal name ruduer it can be made to sink and to remain during its run at any required distance below the surface of the water, so that it may be discharged from the deck of a ship or from a tube opening into the sea below the water line. At close quarters this is a very destructive weapon against ironclad vessels, striking them beneath their armour. The Harvey torpedo is constructed to be pulled through the water something in the fashion of a ship's log. It is of such a form as to pull the line out at a considerable angle to the the line out at a considerable angle to the keel of the towing vessel, which endeavours to manœuvre so as to draw the torpedo under the stern of an enemy, and explode it on contact by a trigger bolt. The spar or outrigger torpedo consists simply of a metal case containing the explosive substance (gunpowder, gun-cotton, dynamite, &c.), and fitted with a fuse constructed so that it can be fired at pleasure, or exploded by contact with a ship's side. It is screwed on to a long spar, which is usually fixed in the bow of a swift boat or steam-launch, which endeavours to reach and push the which endeavours to reach and push the

Torricellian (tor-ri-sel'li-an or tor-ri-chel'li-an), a. Pertaining to Torricelli, an Italian physicist and mathematician, who, Italian physicist and mathematican, who, in 1643, discovered the principle on which the barometer is constructed by means of an experiment called from him the Toricellian experiment. This experiment consisted in filling with mercury a glass tube closed at one end and then inverting it; the open end was then brought under the surface of mercury in a vessel, when the column of mercury in the tube was observed to descend till it stood at a height equal to about 30 inches above the level of the mercury in the vessel, leaving a vacuum at the top. bethe vessel, leaving a vacuum at the top, be-tween the upper extremity of the column and tween the upper extremity of the column and that of the tube. This experiment led to the discovery that the column of mercury in the tube is supported by the pressure of the atmosphere acting on the surface of the mercury in the vessel, and that this column is an exact counterbalance to the atmospheric pressure. See BAROMETER.—Torricellian tube, a glass tube 30 or more inches in length, open at one end and hermetically sealed at the other, such as is used in the barometer.—Torricellian vacuum such as Torricellian vacuum, a vacuum such as that produced by filling a barometer tube with mercury, as in the Torricellian experiment; the vacuum above the mercurial col-umn in the barometer.

to untwist after being twisted; as, the tor-sibility of a fibre or rope. [Rare.] Torsion (tor'shon), n. [L. L. torsio, from L. tor-queo, to twist. See TORTURE.] 1. The act of twisting; the twisting, wrenching, or strain-ing of a body by the exertion of a lateral ing of a body by the exertion of a factral force tending to turn one end or part of it about a longitudinal axis, while the other is held fast or twisted in an opposite direc-tion.—2 In mech. the force with which a body, such as a thread, wire, or slender rod resists a twist, or the force with which it tends to return to its original state on being twisted. The resistance which cylinders and prisms formed of different substances oppose to torsion, furnishes one of the usual methods of determining the strength of materials. Such machines as capstans and windlasses, also axles which revolve with windlasses, also axles which revolve with their wheels, are, when in action, subject to be twisted, or undergo the strain of tor-sion. If a slender rod of metal be sus-pended vertically, so as to be rigidly fixed at the point of suspension, and then twisted through a certain angle, it will, when the twisting force ceases to act, untwist itself or return in the opposite direction with a greater or less force or velocity until it come to rest in its original position. The limits to rest in its original position. The limits of torsion within which the body will return of torsion within which the body will return to its original state depend upon its elasticity, and the force with which it tends to recover its natural state is called elasticity of torsion. This force is always proportional to the angle through which the body has been twisted. If a body is twisted so as to exceed the limit of its elasticity, its particles will either be wrenched asunder, or it will take a set, and will not return to its original position on the withdrawel of the twisting. position on the withdrawal of the twisting force.—Torsion balance, or balance of torsion.

If a piece of very fine wire, silk, or spun glass be suspended in the manner above stated, and then twisted, it will, when released, begin to untwist itself, and by the momenbegin to untwist itself, and by the momentum acquired in the act of untwisting will twist in the opposite direction to a greater or less extent, according to the amount of twisting to which it has been subjected. It will then begin to return, and thus by a series of oscillations, continually diminishing in extent, it will at length gradually settle in its original position. Now if a needle or an index be attached to the lower attractive of the suspended wire or thread extremity of the suspended wire or thread, and a graduated circle be placed immediately beneath the index in a horizontal position, so that the centre of the circle may be directly below the point of suspension of the index, the apparatus thus constructed will form the torsion balance. This balance has form the torsion balance. This balance has been employed to measure certain forces too minute to be estimated by the ordinary methods, and by means of it Coulomb was enabled to determine, by direct experiment, the laws which govern the variation of magnetic and electric forces. By means of the same instrument Cavendish afterward detected and measured the attraction of gravitation existing between balls of lead. To tected and measured the attraction of gra-vitation existing between balls of lead. To measure small forces, such as those of elec-tricity, magnetism, &c., with the torsion balance, they are made to act upon one ex-tremity of the index, and thus cause it to tremity of the index, and thus cause it to turn round, and when the force is in equili-brio with the tendency of the suspended wire to untwist, the angle which the index makes with its original position, which is called the angle of torsion, and which is measured by the graduated circle, is the measure of the force employed. In making experiments with the torsion balance the length of the suspended wire, its diameter, and the weights attached to its lower ex-tremity must be taken into account. When the balance is adapted to measure electric forces it is called the torsion electrometer, forces it is called the torsion electrometer, when it is adapted to measure galvanic forces it is called the torsion galvanometer, and when applied to measure magnetic forces it receives the name of the torsion magnetometer.—3. In sury, the twisting of the cut end of a small artery in a wound or after an operation, for the purpose of checking hæmorrhage. The bleeding vessel is seized by a forceps, drawn out for about inch, and then twisted round several times till it cannot untwist itself.

Common or Greek Tortoise (Testudo graca).

when standing alone, is now generally restricted to the family of reptiles Testudinide, or land-tortoises, or with a qualifying term is applied to the Emydæ, the terrapins or freshwater tortoises, and the Trionycide, the mud-turtles, or soft tortoises. The name was often formerly applied to all the members of the order Chelonia, which includes the Chelonide, a salt-water family; but the reptiles of this section are now usually called turtles. (See Terrapin, Turtle.) The distinctive features of the tortoises and other chelonians consist in the modification of the chelonians consist in the modification of the skeleton and of the skin structures or scales skeleton and of the skin structures or scales to form the well-known bony box in which their bodies are inclosed. Thus the spinal elements of the back, together with the expanded and united ribs, form the carapace or back, whilst the sides of the box are formed by marginal plates, which by some zoologists are regarded as representing the ossified and modified cartilages of the ribs, and by others as membrane bones developed by the skin. The plastron or lower part of the bony case is formed by nine pieces, as to the nature of which naturalists also disagree, some considering it merely as a agree, some considering it merely as a greatly modified sternum or breast-bone, greatly modified sternum or breast-bone, and others as composed of membrane bones developed like the marginal plates by the skin. The Testudinides (the typical land-tortoises) have short stunted limbs adapted for terrestrial progression; the short toes are bound together by the skin, and have well-developed natis. The carapace is strongly convex, and is covered by horny

epidermic plates. The horny jaws are un-protected and adapted for cutting, or may be divided into serrated processes. The head, limbs, and tail can be completely retracted within the carapace. Though capable of swimming, the tortoises proper are really terrestrial animals, and are strictly vegetable feeders. The most familiar extended in the complete of the complete ample is the common Greek or European tortoise (Testudo græca) so frequently kept as a household pet, and which occurs chiefly on the eastern borders of the Mediterranean. These animals sometimes live to a great age (over 100 years according to some), and age (over 100 years according to some), and hybernate through the colder season of the year. They attain a length of 12 inches. A much larger species is the great Indian tortoise (*T. indica*), which inhabits in great numbers the Seychelles and Galapagos Islands, and attains a length of over 3 feet, and a weight of 200 lbs. Its fiesh is reckoned food of excellent quality, as are also its eggs. The box tortoise of India and Madagascar (Cinyxia arachnoides) is remarkable for the outlose of the controls of t Cinyxis arachnoides) is remarkable for the curious development of the front part of the plastron which shuts over the anterior aperture of the shell like a lid when the animal retracts itself. The box tortoise of North America (Cistudo carolina), in which North America (Cistudo carolina), in which the hinder part of the plastron forms a lid, is included among the Emydæ or terrapins, as is also the lettered tortoise (Emysæcripta) belonging to the same continent, and so named from the curious markings of its shell. —2. Tortoise-shell (tor'tois-shel or tor'tiz-shel) n. A name popularly applied to the shell or rather the scutes or scales of the tortoise and other allied chelonians, especially to the shell of the Chelonia imbricata (the to the shell of the Chelonia imbricata (the hawk's-bill turtle), a species which inhabits tropical seas. The horny scales or plates which form the covering of this animal are extensively used in the manufacture of combs, snuff-boxes, &c., and in inlaying and other ornamental work. It becomes very plastic when heated, and when cold retains with sharpness any form it may be moulded to in its heated state. Pieces can also be welded together under the pressure of hot irons. The quality of tortoise-shell depends mainly on the thickness and size of the scales, and in a smaller degree upon the clearness and brilliancy of the colours. The

2. A political party name first used in Eng-2. A political party name first used in England about 1679, and applied originally as an epithet of reproach to all who were supposed to be abettors of the imaginary Popish Plot; and then generally to those who refused to concur in excluding a Roman Catholic prince (in the particular instance James II.) from the throne. The nickname, like its contemporaneous opposite Whig, in coming into popular use became much less strict in its application, until at last it came simply to signify an adherent of that political party in the state who disapproved of cal party in the state who disapproved of change in the ancient constitution, and who supported the claims and authority of the king, church, and aristocracy, while their opponents, the Whigs, were in favour of more or less radical changes, and supported the claims of the democracy. In modern times the term has to some extent been supplanted by Conservative, and the Conserva-tive may be considered as the modern repre-sentative of the ancient Tory. See Con-SERVATIVE.

SERVATIVE.

It is curious how often political parties have ended by assuming to themselves names first fastened on them by their adversaries in reproach and scorn.

Tories was a name properly belonging to the Irish bogtrotters, who during our Civil War robbed and plundered, professing to be in arms for the maintenance of the royal cause, and from them transferred about the year 1680, to those who sought to maintain the extreme prerogatives of the Crown.

Trade-wind (tradwind), n. [That is, wind blowing in a regular trade or course.] One of those perpetual or constant winds which occur in all open seas on both sides of the equator, and to the distance of about 30° north and south of it. On the north of the equator their direction is from the north-east (varving at times a point or two of the equator their arrection is from the north-east (varying at times a point or two of the compass either way); on the south of the equa-tor they proceed from the south-east. The origin of the trade-winds is this:—The great heat of the torrid zone rarefies and makes lighter the air of that region, and in consequence of this rarefaction the air rises and quence of this rarefaction the air rises and ascends into the higher regions of the atmosphere. To supply its place colder air from the northern and southern regions rushes towards the equator, which, also becoming rarefled, ascends in its turn. The heated air which thus ascends into the upper regions of the atmosphere being there condensed flows northward and southward to supply the deficiency governed by the medical control of the second of the supply the deficiency caused by the under-currents blowing towards the equator. These undercurrents coming from the north and south are, in consequence of the earth's rotation on its axis, deflected from their course as they approach the equatorial region, and thus become north-east and south-east winds, constituting the tradewinds. The belt between the two tradewinds is characterized by calms, frequently interrupted, however, by violent storms. The position of the sun has an influence on the strength and direction of the trade-winds, for when the sun is near the tropic of Cancer the south-east wind becomes gradually more southerly and stronger and the north-east weaker and more easterly. The effect is reversed when the sun approaches towards the tropic of Capricorn. Trade-winds are constant only over the open ocean, and the larger the expanse of ocean over which they blow (as in the Pacific) the more steady they are. When these winds blow over land they are ob-

1. A dramatic poem, representing an important event or a series of events in the life of some person or persons, in which the diction is elevated and the catastrophe melancholy; that kind of drama which represents a tragical situation or a tragical character. Tragedy originated among the Greeks in the worship of the god Dionysus or Bacchus. A Greek tragedy always consisted of two distinct parts: the dialogue, which corresponded in its general features to the dramatical compositions of modern times; and the chorus, the whole tone of which was lyrical rather than dramatical, and which was meant to be sung, while the dialogue was intended to be recited. The unity of time; namely, that the duration of the action should not exceed twenty-four hours; and that of place, namely, that the scene in which the events occur should be the same throughout, are modern inventions.

4. In math. a term applied to any equation, curve, or quantity which cannot be represented or defined by an algebraical expression of a finite number of terms, with numeral sion of a finite number of terms, with numeral and determinate indexes. Transcendental quantities include all exponential, logarithmic, and trigonometrical lines, because there is no finite algebraical formulæ by which these quantities can be expressed.— Transcendental equation is an equation into which transcendental quantities enter. But transcendental equations sometimes signify such differential equations as can only be such differential equations as can only be integrated by means of some curve, logar-ithm, or infinite series.—Transcendental curve is such as cannot be defined by any algebraic equation, or of which, when it is expressed by an equation, one of the terms is a varieble curative. Transcendentalism (trans-sen-dent'alizm), n. 1. The state or quality of being transcendental. Specifically—2. A term sometimes applied to the system of philosophy founded by Kant. In this philosophy all those principles of knowledge which are original and primary, and which are determined a priori, all purely subjective forms of intuition (as space and time), are called transcendental. They involve necessary and strictly (not comparatively) universal truths, and so transcend all truth derived from experience, which must aluniversal truths, and so transceine an orwarderived from experience, which must always be contingent and particular. The principles of knowledge, which are pure and transcendental, form the foundation of all knowledge that is empirical, derived the provisions or determined d posteriors. an knowledge that is empirical description.

As Schelling and Hegel claim to have discovered the absolute identity of the objection. tive and subjective in human knowledge, or of things and human conceptions of them, the Kantian distinction between transcend-ent and transcendental ideas can have no place in their philosophy. And hence with them transcendentalism claims to have a true knowledge of all things material and immaterial, human and divine, so far as the immaterial, numan and divine, so lar as the mind is capable of knowing them. And in this sense the word is now most generally used. It is also sometimes used for that which is vague and illusive in philosophy.

Treason and tradition are doublets. See TRADITION.] A betraying, treachery, or breach of faith, especially by a subject against the sovereign has, in England, been always regarded as high treason, in contradistinction to certain offences against private superiors, which were formerly ranked as petit or petty treason. (See under PETIT.) There are a number of different species of treason, five of which were declared by an act passed in the time of Edward III.

(1) When a subject doth compass or imagine the death of the king's eldest son and heir.

(3) If a man do levy war against the king within the realm. (4) Adhering to the king's enemies in his realm, or giving them aid or comfort. (6) Slaying the chancellor, treasurer, or king's justices. Several other kinds of treason were subsequently defined; thus in the time of Ahna eathempts to subvert the Act of Settlement were so characterized. So after the accession of Queen Victoria the marriage of any child of the present queen, being under eig

have descended to him or her, without the written consent of the regent and parliament was declared treason. Misprision or bare concealment of treason is no longer a capital offence. The counterfeiting of the king's privy or great seal and of the king's money was at one time also regarded as treason. The former punishment for treason was that the condemned should be determined about the condemned should be drawn on a hurdle to the place of execution and there to be hanged and disembowelled alive, and then beheaded and quartered; and a conviction was followed by foreiture of land and goods, and attainder of blood; but this is now restricted to hanging for-feiture and attainder being abolished by 33 and 34 Vict. xxiii. In the United States treason is confined to the actual levying of war against the United States, or in adher-ing to their enemies, giving them aid and

Treasury (trezh ū-ri), n. 1. A place or building in which stores of wealth are reposited; particularly, a place where the public revenues are deposited and kept, and where money is dishursed to defray the expenses of government; also, a place where the funds of an incorporated company or private society are deposited and dishursed.—2. A department of government which has control over the management, collection, and expenditure of the public revenue. The duties of this department in Britain are at present performed by a board of five lords-commissioners instead of a lord high treasurer, as in former times. The chief of these commissioners, or first lord of the treasury, is, by custom, the head of the administration or prime minister, and may be a member of either house of parliament. He has an extensive ecclesiastical, legal, and civil patronage, appoints all the chief officers of state, and regulates the various departments under the crown. As head of the executive his duties are so multifarious that he takes little practical control of the treasury unless he holds in addition the chancellorship of the exchequer, which he can only do, however, if he is a commoner. The virtual head of the treasury is the chancellor of the exchequer, who must be a member of the Mouse of Commons, and who exercises the most responsible control over the expenditure of the different branches of the service. He prepares an annual estimate of the state ure of the different branches of the service. He prepares an annual estimate of the state expenses, and of the ways and means by which it is proposed to meet them, and lays this statement, called the budget, before the House of Commons. The duties of the three remaining members of the board, the junior lords, are merely formal, the heaviest portion of the executive functions devolving on the two joint secretaries of the depart-ment, who are also members of the lower

house, and on a permanent official secretary. One of the joint secretaries is usually the ministerial 'whip,' who has the non-official but important duty of looking after the interest of his party by securing the attendance of as many members as possible on his own side of the house at important divisions. The custody of the public revenue is vested. own side of the house at important divisions. The custody of the public revenue is vested in the exchequer, but the function of payment belongs to the treasury, consequently all sums withdrawn from the exchequer must be vouched for by a treasury warrant. The treasury has the appointment of all officers engaged in the collection of the public revenue; the army, navy, and civil service supplies are issued under its authority; and all exceptional cases and disputes relating to the public revenue are referred. relating to the public revenue are referred to its decision. Several important state departments, as the boards of customs and departments, as the boards of customs and inland revenue, the post-office, the office of woods and forests, are under the general authority or regulation of the treasury. —

Trifoliate, Trifoliated (tri-fő'li-át, tri-fő'li-ât-ed), a. [L. tri=tres, three, and folium, a leaf.] Having three leaves: used especially

in botany. Trifoliolate (trī-fō'li-ō-lāt), a. In bot. having

three leaflets. Trifolium (trī-fo'li-um), n. Trifolum (tri-fö'li-um), n. [L., from tri=tres, three, and folium, a leaf.] A most extensive genus of plants, nat. order Leguminose, papilionaceous tribe; the trefoils. It is so named from its leaves possessing three segments. The species, which are very numerous, are principally inhabitants of temperate climates, and are found in all quarters of the world. They are all more or less pasture or fodder plants; a few of them are particularly valuable to the farmer, and their introduction into agriculture, under the name of clover, has greatly supplemented his means of producing animal food. The most important species are T. pratense, common purple trefoil, or red clover; T. incarnatum, flesh-coloured trefoil, or reactive clover; T. meatium, meadow trefoil. IL.. from tri=

pens, white trefoil, white or Dutch clover; T. incarnatum, flesh-coloured trefoil, or scarlet clover; T. medium, meadow trefoil, marl clover, or cow-grass; T. procumbens, hop trefoil or yellow clover; T. filiforne, lesser yellow trefoil; T. hybridum, alsike clover. The name cow-grass is also given to a perennial form of T. pratense, called by seedsmen T. pratense perenne, an important pasture plant. About 280 species of Trifolium are described, found mostly in the temperate and sub-tropical regions of the northern hemisphere, a few occurring in northern hemisphere, a few occurring in the mountainous parts of tropical America, and in extra-tropical South America and

and in extra-tropical South America and Australia.

[Gr. tri-treis, three, gōnia, an angle, and karpos, fruit.] A genus of fossil thick-shelled fruits occurring in large quantities in the coal-measures, so named from the three corners on the surface of the shell. They resemble the fruit of Salisburia, a drupe-bearing coniferous tree of China and Japan, but may be palm-nuts.

Trigonocephalus (tri-gō'nō-sef"a-lus), n. [Gr. trigonos, a triangle, and kephale, the head.] A genus of poisonous serpents, closely allied to the rattlesnakes, family Crotalide. The T. lanceolatus, or lanceheaded viper of Martinique, which frequents the sucre core slattetiers and substitute. neaded viper of Martinique, which frequents the sugar-cane plantations, and subsists mostly on rats, is extremely dangerous from its size and venomous power. It is yellow or grayish, moreor less mottled with brown; attains a length of 6 or 7 feet; and, besides the Antilles, inhabits Brazil and other parts

of South America.
Trigonocerous (tri-gō-nos'ėr-us), α. [Gr. trigonon, a triangle, and keras, a horn.] An epithet applied to an animal having horns with three angles.

Trigonometric (trig'o-no-met"rik), a. taining to trigonometry. See TRIGONOMET-

Trigonometrical (trig'o-no-met'rik-al), a. Pertaining to trigonometry; performed by or according to the rules of trigonometry.—
Trigonometrical canon, a table which, beginning from one second or one minute, expresses in order the lengths which every sine, tangent, and secant have in respect of the radius, which is supposed unity.— Trigonometrical curves, a name given to cer-tain curves which have such equations as $y = \sin x$, $y = \cos x$, $y = a \cos x + b \cos 2x$, &c. These curves may be constructed from the These curves may be constructed from the fundamental properties of the sine, cosine, &c.—Trigonometrical lines, lines which are employed in solving the different cases of plane and spherical trigonometry, as radius, sines, tangents, secants, cosines, cotangents, cosecants, &c. These lines, or the lengths of them, are called the trigonometrical functions of the arcs to which they belong. When an arc increases through all its values from 0° to 360° the sines and cosines are from 0° to 360°, the sines and cosines are positive in the first and second quadrants, and negative in the third and fourth: the tangents and cotangents are positive in the first and third, and negative in the second and fourth; the cosines and secants are positive in the first and fourth, and negative in the second and third; and the versed sines are positive in all the four quadrants.—Trigo-nometrical series, infinite series which are of the form $a \sin x + b \sin 2x + c \sin 3x$, &c., and $a \cos x + b \cos 2x + c \cos 3x$, &c.— Trigonometrical survey, a term which may Trygonometrical survey, a term which may be applied to any survey of a country which is carried on from a single base, by the computation of observed angular distances; but the term is usually confined to measurements on a large scale, embracing a considerable extent of country, and requiring a combination of astronomical and geodetical operations. A trigonometrical survey may be undertaken extreme terms of the properties of the country and the control of the country and th be undertaken either to ascertain the exact stuation of the different points of a country relatively to each other, and to the equator and meridians of the terrestrial globe, for the purpose of constructing an accurate map, or to determine the dimensions and map, or to determine the dimensions and form of the earth, by ascertaining the curvature of a given portion of its surface, or by measuring an arc of the meridian. The most minute accuracy and the most perfect instruments are required in all the practical parts of such operations; and it becomes necessary to have regard to the curvature of the earth's surface, the effects of temperature, refraction, altitude above the level of the sea, and a multitude of circumstances of the sea, and a multitude of circumstances which are not taken into account in ordinary surveying. In conducting a trigonometrical survey of a country (as the ordinance survey of Britain), signals, such as spires, towers, polee serected on elevated situations, or other objects, are assumed at as great a distance as will admit of distinct and accurate observations with telescopes of considerable as will admit of distinct and accurate observations, with telescopes of considerable power attached to the instruments used in measuring the angles. In this way, starting from a measured base-line, the country will be divided into a series of connected triangles called primary triangles; and any side of any one of these being known, the remaining sides of all of them may be computed by trigonometry. By means exactly similar, each of these triangles is resolved into a number of others called secondary into a number of others called secondary triangles; and thus the positions of towns, villages, and other objects are determined. The length of the base or line measured, The length of the base of line measured, which is an arc of a great circle, must be determined with extreme accuracy, as an error in measuring it would affect the entire survey. For checking the measurements and the computations it is proper to measurements and the computations it is proper to measurements. sure some other line at a considerable distance from the first, as the comparison of its measured and computed lengths will be a test of the accuracy of the intermediate operations. Such a line is called a base of verification. The measurement of a base is one of the principal difficulties in the survey, chiefly on account of the inequalities of the earth's surface, and the variations in the length of the measuring instrument, arising from the change of temperature.

The base is assumed on as flat a portion of country as can be obtained, and the chain or other measuring instrument is constructed with extreme care.

Trigonometrically(trig'o-no-met"rik-al-li),
adv. In a trigonometrical manner; according to the rules or principles of trigonometry.

Trigonometry (trig-o-nom'et-ri), n. [From Gr. trigonon, a triangle, and metron, a measure.] According to the primitive meaning of the term, the measuring of triangles, or the science of determining the sides and angles of triangles, by means of certain parts which are given; but in its modern acceptation it includes all theorems and formulæ ation it includes all theorems and formulæ relative to angles and circular arcs, and the lines connected with them, these lines being lines connected with them, these lines being expressed by numbers or ratios. In fact, the principles of trigonometry are of very general application, furnishing means of investigation in almost every branch of mathematics. Trigonometry, in relation to its practical utility, may be regarded as the most important of all the applications of mathematics, especially in relation to astronomy, navigation, and surveying. Trigonometry is of two kinds, plane and spherical, the former treating of triangles described on a plane, and the latter of those described on the surface of a sphere. In every trion a plane, and the latter of those described on the surface of a sphere. In every triangle there are six things which may be considered, viz. the three sides and the three angles, and the main object of the theoretical part of trigonometry is to deduce rules by which, when some of these are given, the others may be found by computation, such computations being facilitated by tables of sines, tangents, &c. In plane trigonometry any three of the six parts of a triangle being given (except the three angles), the other parts may be determined:

given (except the three angles), the other parts may be determined; but in spherical trigonometry this exception has no place, for any three of the six parts being given, the rest may thence be determined, the sides being measured or estimated by degrees, minutes, &c., as well as the angles.

The mode in which trigo. The mode in which trigo-

nometrical definitions are given is as follows:

Let ABC be a right-angled triangle, then $\frac{C}{A}\frac{B}{C}$ = sine of A; $\frac{A}{A}\frac{B}{C}$ = cosine of A; $\frac{B}{A}\frac{C}{B}$ =

tangent of A; $\frac{A}{C}\frac{B}{B}$ = cotangent of A; $\frac{A}{A}\frac{C}{B}$ =

secant of A; $\frac{A \cdot C}{C \cdot B}$ = cosecant of A; 1-cosine

of A = versed sine of A; 1 - sine of A = coversed sine of A. Both plane and spherical trigonometry is divided into right-angled

TTIODite (tri-10-bit), n. [Gr. tri=treis, three, and lobos, a lobe.] One of an extinct and widely-distributed family of palæozoic crustacea, nearly allied to the Phyllopoda. Tri-lobites are especially characteristic of the Silurian strata; about a dozen genera appear in the Devonian, three or four in the carbon-iferous, and none higher. They comprehend iterous, and none higher. They comprehend those species in which the body is divided into three lobes, which run parallel to its axis. Trilobites are supposed by Burmeister to have moved by swimming in an inverted position, belly up, immediately beneath the surface of the water. When attacked they could roll themselves into a ball: They fed on small water animals, and inhabited gregariously and in vast numbers the shallow water near coasts. No antennæ or limbs have yet been detected; 'still,' says Owen, 'there can be no doubt they enjoyed such locomotive powers as even the limpet and chiton exhibit.' The lenses of the eye are frequently beautifully preserved so as to be perceptible by the naked eye. In Asaphus caudatus each eye has 400 facets, and in Atyrannus 6000. The species vary greatly in size, some being no larger than a pin's head, while A. gigas is found 18 inches long. Proon small water animals, and inhabited

Truck-system (truk'sis-tem), n. The practice of paying the wages of workmen in goods instead of money. This practice has prevailed particularly in the mining and manufacturing districts; the masters establishing warehouses or shops, and the workmen in this particular in the state of the sta men in their employment either getting their wages accounted for to them by supplies of wages accounted for to them by supplies of goods from such establishments, without receiving any money, or getting the money on a tacit or express understanding that they were to resort to the premises of their masters for such necessaries as they required. Under this system the workmen have often to pay exorbitant prices for their goods, and from the great facility afforded to them of procuring liberal supplies of goods in anticipation of wages, they are apt to be led into debt. These and other evils incident to the system induced the legislature led into debt. These and other evils inci-dent to the system induced the legislature to endeavour to put a stop to it by an act passed in 1831; but the act is scarcely com-preliensive enough, and is still often more or less violated.

5. In building, a combination of timbers, of iron, or of timbers and iron work, so arranged as to constitute an unyielding frame. The simplest example of a trues is the principal or main couple of a roof, in which aaThe simplest example of a truss is the principal or main couple of a root, in which aca (fig 1), the tie-beam, is suspended in the middle by the king-post b to the apex of the angle formed by the meeting of the rafters cc. The feet of the rafters being tied together by the beam a and being thus incapable of yielding in the direction of their length, their apex becomes a fixed point, to which the beam a is trussed or tied up to prevent its sagging, and to prevent the rafters from sagging there are inserted the struts dd. There are other forms of truss suited to different purposes, but the conditions are the same in all, viz. the establishing of fixed points to which the tie-beam is trussed. Thus, in fig. 2, two points aa, are substituted for the single one, and two suspending posts are required. These are called queen-post, and the truss is called a queen-post truss. The principle of the truss has been widely adopted in bridge building. See Roof.—6. In arch. a large corbel or modillion supporting a mural monument, or any object projecting from the face of

For the law was given

For the law was given by Moses; but grace and truth came by Jesus Christ. John i. 17. (d) A verified fact; a true statement or proposition; an established principle, fixed law, or the like.

Fundamental truths, like the lights of heaven, are not only beautiful in themselves, but give light to other things, that, without them, could not be seen.

According to Dr. Reid, the truths that fall within the compass of human knowledge, whether they be self-evident or deduced from those that are self-evident, may be refrom those that are sen-evident, may be reduced to two classes, namely, necessary, inmutable, or first truths, and contingent and
mutable truths. A necessary truth is one that
depends not upon the will and power of any
being; it is immutably true, and its contrary
impossible. A contingent truth is one which
depends upon some effect of will and power impossible. A continuent crean is one which depends upon some effect of will and power, which had a beginning and may have an end. Of the first class are the relations of numbers (as that two and two make four), axioms in mathematics, and all the concluaxioms in mathematics, and all the conclusions drawn from them; that is, the whole body of the science of mathematics. To the second class of truths, viz., those that are contingent, belong all those truths that express matters of fact or real existences (as that grass is green), depending upon the will and power of the Supreme Being—In truth, in reality; in fact; in sincerity.

It is a little larger than the common house-fly. The following account of the effect of its bite is given by Dr. Livingstone: 'In the ox the bite produces no more immediate effect than in man. It does not startle him as the gad-fly does, but in a few days the following symptoms supervene: the eyes

and the nose begin to run, the coat stares as if the animal were cold, a swelling ap-pears under the jaw and sometimes at the

navel, and, though the animal continues to graze, emaciation commences, accompanied with a peculiar flaccidity of the muscles, and this continues unchecked until, perhaps months afterwards, purging comes on, and the animal, no longer able to graze, perishes the animal, no longer able to graze, perishes in a state of extreme exhaustion. Those which are in good condition often perish soon after the bite is inflicted, with staggering and blindness, as if the brain were affected by it. Sudden changes of the temperature produced by falls of rain seem to hasten the progress of the complaint, but in general the emaciation goes on uninterruptedly for months, and, do what we will, the poor animals perish miserably.

Tungsten (tung'sten), n. [Sw. and Dantung, heavy, and sten, stone, heavy stone, or ponderous ore, so named from the density of its ores.] 1. At. wt. 184. Sym. W. A metal discovered by D'Elhuyart in 1781. It has a grayish white colour, and considerable lustre. It is brittle, nearly as hard as steel, and less fusible than manganese. Its specific gravity varies from 17.5 to 18.5. When heated to redness in the open air it takes fire, and is converted into tungstic oxide (WO₂), and it undergoes the same change by the action of hydrochloric acid. Digested with a concentrated solution of pure potash, it is dissolved with disengagement of hydrogen gas, and tungstate of potash is generated. The ores of this metal are the native tungstate of lime, and the are the native tungstate of lime, and tungstate of iron and manganese, which latter is also known by the name of wolfram, and the same name is also given to the metal. Tungsten may be procured in the metallic state by exposing tungstic oxide to the action of charcoal or dry hydro-gen gas at a red heat, but an exceedingly intense heat is required for fusing the metal. 2. An obsolete name for the native tungstate of lime.

by the escape of water through orifices, under the influence of pressure derived from a fall. Turbines are now made after a vast variety of patterns. The oldest and simplest is the Scotch turbine, or Barker's mill (which see). In another common form the water passes vertically down through the wheel between fixed screw blades, which give it a spiral motion, and then strikes similar blades attached to a movable spindle, but placed in the opposite direction, so that the impact of the water communicates a rotatory mo-tion to the blades and spindles. Or the water may be passed from the centre horizontally outwards through fixed curved blades, so as to give it a tangential motion, and thereby cause it to act on the blades of the wheel which revolves outside. In the example represented in the annexed cut, the water is introduced into a close cast-iron vessel a, by the pipe b, connecting it with the reservoir. Here, by virtue of its pressure, it tends to escape by any aperture which may be presented; but the only apertures consist of a series of curved float-boards ff, fixed to a horizontal plate g, mounted upon a central axis h, which passes upwards through a tube connecting the upper and lower covers, c and d, of the vessel a. Another series of curved plates ee, is fixed to the upper surface of the disc d, to give a determinate direction to the water before flowing out at the float-boards, and the curves of the disc d, to give flowing out at the float-boards, and the curves of these various parts are so adjusted as to render the reactive force of the water avail-

The radical leaves are oblong and lyrate, the upper ones entire; the flowers usually yellow. The upper part of the root, which in the wild state is a comparatively hard woody substance, has been transformed by cultivation into a large fleshy bulb. The turnip, as a culinary vegetable and as a cattle food, was well known to the Greeks and Romans, the latter of whom may have introduced it into gardens in Britain. The root is generally used as a culinary vegetable in all temperate climates; the leaves and flower-shoots are used mates; the leaves and flower-shoots are used mates; the leaves and flower-shoots are used as greens, and the seed-leaves as a salad. The field culture of the larger-rooted varieties has proved of great advantage to the British farmer, supplying a very valuable rotation crop, and providing a winter food for cattle and sheep. The most advantageous mode of field culture is by drills, which will produce crops of treble the weight. which will produce crops of treble the weight of those grown in the broadcast manner. The roots of the turnip have often a tendency to divide and become hard and worth-less—a condition known as finger-and-toe, or dactylorhiza. This disease seems to be a ten-dency of the plant to return to the wild state, and is best met by the farmer using new and and its best mere by the tamer using new and selected seed. The plant thrives best on a rich and free soil and in moist cloudy weather. The Swedish turnip is probably a hybrid between *B. campestris* and *B. Rapa* or *Napus*. *B. Unlike the spots of typhus those of typhoid fever disappear on pressure. By some authorities typhoid and typhus fevers have been regarded as the less and greater degree of one common disease, but the majority of physicians now consider them to be distinct disease, with cortain resemto be distinct diseases with certain resemblances. Typhus has generally prevailed as an epidemic where insanitary conditions, as an epidemic where insanitary conditions, overcrowding, and famine have prevailed; the rebreathing of air loaded with emanations from crowded living beings being its chief cause. Typhoid, on the other hand, is now far more common, occurring among all classes of society, in isolated and healthy villages, as well as in the larger cities. It may be induced by purely external causes, as by bad ventilation, sewer-gas, exhalations of decomposing matter in cellars or near houses, privies, and especially the contamination of drinking water. It is also of longer duration than typhus, there being at least three full weeks of the active fever, followed by several weeks' gradual convalescence, while in the average from typhus speedy recovery ensues at the end of the second week. Known also as Enteric and Gastric Fever.

Typhus (tl'fus), n. [Gr. typhos, stupor or coma.] A species of continued fever attended by great debility. It is contagious or infectious, and often epidemic, but is most prone

to attack debilitated persons, and is aided in its progress by want of cleanliness, good food, and fresh air. With the sanitary reform of overcrowded localities, barracks, fails, ships, &c., the prevalence of this plague has now been considerably diminished. Its attack is generally characterized by inordinate now been considerably diminished. Its atack is generally characterized by inordinate
muscular and nervous debility, great depression of spirits, weariness, flying pains,
sighing, and a frequent, small, and sometimes fluttering pulse. The tongue is foul
and brown, and the taste impaired, and not
unfrequently nausea and bilious vomiting
prevail. About the fourth or fifth day an
eruption of a deep livid colour appears on
the abdomen, the spots of which do not
disappear on pressure, as those of typhoid
do. As the disease advances the debility
increases; the speech becomes inarticulate,
muttering, and delirious, and there is a tendency to bleeding from the nose, mouth,
and bowels. Typhus is frequently fatal,
death in the majority of cases supervening
before the fifteenth day after attack. This
disease is also known as hospital fever, shipfever, jail-fever, camp-fever, brain-fever,
and spotted fever, and has sometimes been
considered as an acute form of fever of
which typhoid is a less virulent example.

U. The twenty-first letter and the fifth vowel in the English alphabet. Its true primary sound was that which it still retains in most of the languages of Europe, that of oo in cool, tool, good, wood, &c., answering to the French ou in tour, the sound being sometimes short, sometimes long. This sound is one of the original Indo-European vowelsounds. (See A.) In Anglo-Saxon the long sound was often marked with an accent to distinguish it from the short. The former has in modern English commonly become distinguish it from the short. The former has in modern English commonly become the diphthong ou or ow, as A. Sax. thæ thou, nût—now, mûth—mouth, &c. After r, however, and also after the sounds sh and zh, u has generally the old long sound, as in rule, truth, sure, &c., and the same sound differently represented is still heard in room. differently represented is still heard in room = A. Sax rinn, brook (ver) = A. Sax brūcan. The old short sound of u is still retained in some words, as in bull, full, put, &c., but in general this sound became changed (apparently about the middle of the seventeenth century) to the sound heard in cut, tun, &c., which was a new sound in English. In us, but, the u was originally long. This sound, which is very similar to that of the unaccented French e, is characteristic of English, and is often given to the other vowels, a, e, o, when unaccented, as in the words cavalry, sister, where the italicized vowels have almost, if not altogether, this indistinct, stifled u-sound. In the case of o this pronunciation is not confined to unaccented yowels, as in numerous instances the cented vowels, as in numerous instances the accented o is exactly equivalent to this sound of u; for example, come, money, among, &c.
The long sound that this letter commonly represents at the present day, as in mute,

pure, duke, diffuse, &c., is not a simple vowel, the u-sound having really an i-sound before it. This latter sound seems to have estab-lished itself about the beginning of the seventeenth century. Some speakers give u this sound even after r, but the letter is not comsound even after r, but the letter is not commonly so pronounced. Vulgar speakers, again, pronounce such words as duke, &c., as if they were written dook, &c. The words bury and busy (with their derivatives) exhibit solitary peculiarities in the pronunciation of this character. The sound of u in mute is also represented by other combinations, as by ue in due, ew in dew, and ui in suit. With regard to ue the remark has been made; that it is used in later and ui in suit. With regard to ue the remark has been made 'that it is used in later spelling as a final u owing to a rule made by no one knows whom, no one knows why, and no one knows when, that no English word can end in u.' (A. J. Ellis.) In plaque, roque, &c., ue indicates that the preceding vowel is to be pronounced long and the g with its hard sound; in tongue it is a useless excrescence. Besides the sound in suit, ui has several other sounds as in build, wide. with its hard sound; in tongue it is a useless excrescence. Besides the sound in suit, us has several other sounds, as in build, guide, fruit, anguish, mosquito, &c. In buoy the us no longer heard, and probably it never was heard in buy. In the best period of Roman literature the u-sound was expressed by the character V. The Anglo-Saxon alphabet did not have the character V at all, the sound, when it occurred (as between two vowels) being represented by f, or occasionally by u. In later times u and v stood indifferently for either sound, the capital being generally written V. In the seventeenth century its special function was assigned to each, yet almost every dictionary continued to combine the u and v, and this was not quite given up till far on in the present century.—U. in chem. is the symbol of uranium. U.C., in dates belonging to Roman history, is a contraction for ab urbe condita, from the time the city was built; as, U.C. 400, the year of Rome 400. U.K., the United Kingdom. [G, from prefix un, indicating alteration, and laut, sound = change of sound.] In phiol. the change of a vowel in one syllable through the influence of one of the vowels a, i, u in the syllable immediately following—a common feature in several of the Teutonic tongues. In German umlaut is seen in the frequent change of the vowels a, o, u to \ddot{a} , \ddot{o} , \ddot{u} . In Anglo-Saxon it was very common, and it still appears in the plurals feet and geese, from foot and geose, the vowels being changed by an \dot{u} that originally followed. Umlaut is therefore a kind of assimilation of sounds. The change caused by a is called assimilation and so of the others. In German umlaut is seen in the frequent a-umlaut, and so of the others.

The conception of a sound tends to put the vocal organs in a position to utter it. We conceive the later sounds in a word while yet speaking the former; hence the tendency to utter a sound between the two. No umlaut shows in Gothic. Old H. German has most a-umlaut; Norse, u-umlaut.

Prof. March.

any part of the utmost line of a map. Fuller.

Un-. A prefix derived from two sources with two uses, viz. those of negation and those of reversal or undoing, and hence privation. I. [A. Sax. un-, O.Sax. and Goth. un-, G. un-, D. on-, Icel. u. 6-; cog. with L. in-, Gr. an-, a., Skr. an-, a., all signifying not.] Expressive of simple negation. In this sense it is used chiefly before adjectives, past participles passive, and present participles used adjectively, and when so used it signifies simply not; as, unable, unfair, untrue, untruthful, unwise, uninvited, unchanging, undoubting, unthinking, &c. From such words again adverbs in-ly, and nouns in ness are formed; hence, unfairly, nouns in -ness are formed; hence, unfairly, unfairness, untruthfulness, unchangingly, &c. It is also directly prefixed to some nouns to express the absence or contrary of nouns to express the ansence of contary or what the noun expresses, as in untruth, undress, unrest, unwisdom, &c. Before many words of Latin origin, un, in the sense of mere negation, is naturally represented by in or by non, and sometimes by dis; thus, for uncomplete we have incomplete for unclastic, for unclastic, for unclastic, for unclastic, as; thus, for uncomplete we have incomplete; for unability, inability; for unclastic, inclastic and non-elastic; for unemphatic, non-emphatic; for unreputable, diereputable, dec.—2. [A. Sax. on., ond., and., as in on-lucan, to unlock, on-lessun, to unloose,

and-swarian, to answer, &c.; Icel. O.Sax. and Goth. and., G. ant., as in ant-worten, to answer; cog. L. ante, before; Gr. anti, against, opposite; Skr. anti, over against.) Prefixed to verbs (generally active transitive) it signifies properly the reversing or annulling of the action expressed by the verb; as, undo, unlearn, unlock, unmake, &c. When prefixed to nouns it changes them into verbs implying privation of the &c. When prefixed to nouns it changes them into verbs implying privation of the object named by the noun or of the qualities connoted by it. Thus unfrock, uncowl, uncoat, unhelm,&c., signify to deprive or divest of a frock, cowl, &c., while unman, unsex, unshape, signify to deprive of the qualities of a man, sex, &c. This is sometimes called an privative. Another peculiar use of this un privative. Another peculiar use of this un is found in a few verbs, chiefly obsolete, where it is used in the sense of retract or revoke, as unpredict, unsay, unspeak, unswear, to retract a prediction, a saying, &c.
As further illustrating the force of un in
both its senses we may remark that under
the form unlearned we have really three words-one an adjective signifying illiter ate; as, an unlearned man (un-, not, and adj. learned); one a true past participle of adj. learned); one a true past participle of the active verb to unlearn (un- in sense 2 and learn); as, all you have learned must be unlearned; and, finally, one formed by prefixing un negative to the past participle of the active verb to learn; as, his task is still unlearned. Some words with un- prefixed are hardly used unless qualified by not; thus we speak of a striking prospect, but we should not be likely to say an unstriking prospect, though we should readily say the prospect, though we should readily say the prospect is not unstriking.—[Note. Adjectives and participles with the prefix un-, in the sense of not, being almost unlimited in number, and their meaning generally so obvious, many of them are omitted from this work, as well as their derivative adverbs in -ty and well as their derivative adverbs in -ly and nouns in -ness. When such words, however have a special signification or usage of their own, and are not simply to be explained as equivalent to 'not' and their latter element, equivalent to 'not' and their latter element, they are admitted into the vocabulary. As words of this kind may be instanced unruly, unconscionable, unpretending, unparalleled, unsafe, and the like. Verbs and nouns with un as a prefix (such as unlock, untruth) are also carefully defined, as they belong to a limited class, and are not coined at will by writers or speakers. It may also be added that a number of the words below have only been inserted because used by writers of more or less eminence.]
